

STUDENTS

by

Jerry D. Saye

with the assistance of Wen-Chin Lan

Part Two of the ALISE statistical questionnaire requested schools to provide data dealing with student enrollment and characteristics, class size, degrees awarded, financial aid, and tuition and fees. This part of the questionnaire collected primarily aggregated data reported on 11 data input tables. These data input tables were used to generate the tables that constitute the core of this chapter.

In working with the data reported by the schools some incomplete or inconsistent data were encountered. In a few cases, errors were recognized by schools soon after mailing the data and revised figures were submitted. In the later stages of data entry and analysis, schools were contacted by email, fax and phone to resolve what appeared to be either inconsistencies or reporting errors. In some cases, data requested were not in the possession of schools (this is particularly true for the program categories “Other Graduate” and “Other Undergraduate”) or the schools elected not to provide the requested data for a variety of reasons. As a result, row totals in some tables are greater than the separate counts of cells in that row and for the total of a column. Although no guarantee can be made that all errors have been identified and corrected, it is believed that the accuracy of the data reported by the schools as reflected in the tables that follow is high.

Because data for similar data elements, e.g., enrollment by program level, international student enrollment, etc., were submitted by schools on separate tables, it is possible that some subtotals and totals may vary slightly from table to table due to differences in data supplied. To minimize this problem efforts were made to make these data agree, but it is recognized that it has not been totally removed from the tables that follow. This inconsistency should not cause major problems in that the numbers usually vary only slightly.

Since 1993, a number of tables have been provided that compare some program level data items to those same items from the year before accompanied by an analysis of changes. In this year’s report, comparison of consecutive year data has not been provided; instead, highlights and some interpretation of the current year’s data are given. The text draws attention to specific items on tables rather than being comprehensive and provides additional information on percentage distributions that the tables do not display. In the future perhaps five-year assessments of changes and trends in student demographics may be developed.

Previously, separate tables were sometimes used to report data for males and females. In order to obtain information about the entire program level for a school, it was necessary to add the values from two tables. In this year’s report, information divided by gender has been presented in a single table with a row for males, a row for females and a row for the subtotal for both males and females.

In previous reports, the authors of this chapter have minimized the size of the tables by limiting them only to the schools who reported pertinent data. Thus, there might have been 25 schools who offered a particular program but only 19 reported data and only those 19 were included in the table; all totals and means were calculated for the 19 schools. Likewise, in cases where separate tables were

presented for each gender, it was possible that a school would be included in the table for one gender and not for the other gender because it only had students of one gender in a particular program. In this year's report, all schools that reported enrollment for a specific program level are included in all tables for that program regardless of whether data were reported. It is hoped that this approach will make the tables more consistent and informative.

All data submitted by the schools are represented in the relevant tables unless the data were clearly inconsistent with the data requested. In these latter cases, a footnote is provided explaining the situation and giving the data reported by the school. A dash "-----" has been used throughout this chapter to indicate no response. In a number of cases no data were reported by a school when a "0" would have been the more appropriate response, conversely; in other situations a "0" was reported when no input would have been more appropriate. In preparing the tables, the context of the data to be reported was evaluated against the data schools submitted and, in some cases, zeros were changed to "-----" and "-----" changed to zeros.

Consideration has been given to the meaning conveyed by the numbers in the tables. Totals for rows and columns were calculated and checked against the totals provided by the schools. When a discrepancy was encountered, the school's representative was contacted to try to resolve the difference. Some of the means reported may differ greatly this year from other years. Previously, some mean scores were calculated by dividing the total by the number of schools represented on the table. This year consideration was given to ensuring that the data used for the calculations accurately represents what the result of the calculation is intended to report. In a number of cases the total number of schools reporting will be different from the number used to calculate the mean. For example, if it is known that not all ALA schools provided ethnic data, then in calculating the mean for any ethnic group the number of students in any particular ethnic category was divided by the number of schools reporting ethnic data rather than dividing by all 56 schools. When totals and means are calculated, the number of schools included in the calculation is stated and a footnote is provided indicating which schools were excluded.

In previous reports, the student chapter had a section following the tables that consisted of comments provided by the schools on their questionnaires. These notes are essential to the accurate interpretation of the tables. In order to make these notes more readily available to users of the tables, comments have been placed as footnotes to the relevant table. Additionally, some general comments have been made at the beginning of a section of tables if those comments are pertinent to all tables in that section.

Enrollment by Program and Gender (Table II-1)

Enrollment figures for the 1996 Fall term were requested for each of seven program levels:

- ALA-Accredited Master's
- Other Master's
- Post-Master's
- Doctoral
- Other Graduate
- Bachelor's
- Other Undergraduate

To ensure that each school interpreted the program levels the same way the following program definitions were provided:

ALA-Accredited Master's: Include here only those students who are working toward a master's degree in librarianship, on or off campus.

Other Master's: Include here students in master's degree programs, other than the accredited master's degree in librarianship, that are offered by the school.

Post-Master's: Include here only those students who are working toward a post-master's degree or certificate in library and information science, on or off campus.

Doctoral: Include here only those students who are working toward a doctoral degree in library and information science, on or off campus.

Other Graduate Students: Include here students taking library and information science courses as cognate or service courses or for professional development, on or off campus.

Bachelor's: Include here only those students who are working toward a bachelor's degree in library and information science, on or off campus. Do not include students taking courses as cognate or service courses.

Other Undergraduates: Include here students taking library and information science courses as cognate or service courses for undergraduate credit, on or off campus. Do not include students who are in an established undergraduate program in library and information science.

Schools were directed to provide separate counts for full-time and part-time students differentiated by gender as well as totals. For part-time students, FTE (Full Time Equivalent) figures were also requested as well as total FTE enrollment. The directions called for each school to use its institution's method for computation of FTE or, if no such method existed, to use the following formula:

Consider a student full-time if the course load will enable requirements for the degree to be completed within the normal length of time. For example, if the normal time to complete the degree is 12 courses in four quarters, a student carrying three courses during the quarter should be counted as 1.00 FTE; a student carrying two courses during the quarter should be counted as 0.67 FTE ($2/3 = .667$). Students carrying an overload should be counted as only 1.00 FTE

Although on-campus and off-campus students were to be included in the data submitted, an additional line on the questionnaire also asked for a separate FTE for off-campus students.

Table II-1-a-1 is a summary table presenting the number and percentage of full-time and part-time students, divided by gender, for each of the seven program levels as well as total enrollment figures. Additionally, the percentage of full-time versus part-time students is presented. ALA-accredited master's programs account for the majority (65.9 percent) of the enrollment. Students in "other master's" degree programs account for 6.1 percent of total enrollment. The growing number of schools offering a doctoral degree (25) report a total enrollment for those programs of 628 students or 3.3 percent. Post-master's students comprise only 1 percent of total enrollment and bachelor's degree students 3.6 percent.

All degree levels, except the bachelor's degree, report the majority of their students in a part-time status including nearly two-thirds of ALA-accredited master's and three-quarters of "other master's" degree students.

When distribution by gender is examined, females are found to comprise over three-quarters (77.9 percent) of ALA-accredited master's enrollment. Gender distribution becomes virtually even for students in "other master's" degree programs with 50.1 percent female enrollment. At the doctoral level the gender division shows females in the majority by slightly more than 15 percentage points.

Students

Eight of the 56 ALA schools offer a bachelor's degree. Table II-1-c-1a provides school-by-school enrollment figures. It shows that of the 682 students pursuing a bachelor's degree nearly 90 percent (87.8) of them are enrolled in one of two schools: Syracuse (464) or Pittsburgh (135).

Table II-1-c-2a reports ALA-accredited master's enrollment for each school. It illustrates a wide range of program sizes across the 56 ALA schools – from the largest programs, San Jose (638), Kent State (496), Simmons (446), and South Carolina (444) to the schools with less than 90 students: Alberta (88), Clarion (85), Southern Mississippi (82), and Dalhousie (71).

The distribution of full-time to part-time students also shows wide variation. Six schools have more than three-fourths of their students in a full-time status (Alberta, British Columbia, Dalhousie, McGill, Montréal, and North Carolina – Chapel Hill). It is of note that all six schools have two-year master's programs. Twelve schools have more than 80 percent of their enrollment part-time (Catholic, Drexel, Emporia, Long Island, North Carolina – Greensboro, Pratt, Queens, Simmons, Southern Connecticut, Syracuse, Texas Woman's, and Wayne State). More than half of these schools are located in or near large metropolitan areas.

Seventeen of the ALA schools offer "other master's" degrees in addition to the ALA-accredited master's (Table II-1-c-3a). The mean enrollment figure of 69.1 students per school is heavily skewed by the large enrollments of four schools: Pittsburgh (286), Drexel (259), Missouri (151), and Syracuse (126). The other 13 schools have enrollments under 100 students with nine schools having fewer than 25 students in their second master's programs.

Post-master's programs historically have had relatively low enrollments and Table II-1-c-4a confirms that this trend continues. Of the 26 schools with a post-master's program only two schools (Syracuse (49) and Drexel (27)) had more than 15 students in their program. The high percentage of part-time students in these programs (78 percent) brings the FTE for these programs to very low levels (Table II-1-c-4b).

Nearly half (25) of the 56 ALA schools offer a doctoral program. The 628 doctoral students are distributed unevenly across these schools. The doctoral program at Pittsburgh is by far the largest with 84 students followed by the programs at North Texas (59) and Rutgers (54). No other school has more than 45 students; over half the schools with doctoral programs have enrollments of less than 20. Although nearly half (45.5 percent) of all doctoral students are full-time, the distribution of full-time to part-time varies widely from school to school. Indeed, a few schools report all, or nearly all, their doctoral enrollment as full-time while for others the reverse is true. In some cases, individual school percentages are heavily impacted by small enrollments.

Table II-1-e provides the number of FTE off-campus students each ALA school had registered for the 1996 Fall term. Over two-thirds of the schools (39) had off-campus enrollment with several schools having a very sizeable off-campus student body. The largest off-campus programs were at San Jose (223), South Carolina (183.67), Indiana (160.81), and South Florida (109.10). No other program had an off-campus FTE enrollment of over 100; only five (Arizona, Emporia, Florida State, Kent State, and Long Island) had enrollments between 60 and 100. Twelve schools had off-campus enrollment of under ten FTE students. Seventeen schools had no off-campus students. The total FTE off-campus enrollment is 1,744.6 students with a mean of 31.2 FTE students per school. When the mean is recalculated to include only those schools with some off-campus enrollment, the mean FTE figure rises to 44.7s students although this figure is skewed by the few schools with high off-campus enrollments.

Course Enrollments (Table II-2)

Schools were requested to report the number of students enrolled in courses or sections of courses during the 1996 Fall term. Enrollments were aggregated into increments of five students. Individual study and reading courses were not to be included in these counts.

Table II-2-a-1 reports course and section enrollment distributed across 11 enrollment groups for courses offered in Fall 1996 by each ALA school. The number of courses offered at schools ranged from 12 (Dalhousie) to 79 (Indiana) with a mean of 32 courses per school. Eleven schools (20 percent) offered fewer than 20 courses while seven schools (12.7 percent) offered more than 50.

The majority of courses have enrollments of 6-10, 11-15 and 16-20 students. These three course enrollment groups account for 51.1 percent of all courses offered. The number of courses with enrollments of 41-50 students was relatively small compared to the frequencies of other enrollment groups. There is a noticeable increase in the number of courses offered with a class size of more than 50 students compared to the number offered with 41-50 students. The questionnaire requested schools to comment on courses with enrollments over 50 students (Table II-2-a-2). From these comments it becomes apparent that larger courses are often used to present core material.

As mentioned above, schools were asked not to include independent studies or individual reading courses in their submission of course enrollment data. Instead they were asked to report separately the total number of students enrolled in those courses. Table II-2-a-3 shows the number of independent study or reading courses reported by each ALA school.

Degrees and Certificates Awarded (Table II-3)

For Table II-3 schools were asked to report the total number of degrees and certificates awarded during the 1995-96 academic year, including summer sessions, for five degree categories:

- ALA-Accredited Master's
- Other Master's
- Post-Master's
- Doctoral
- Bachelor's

In supplying these data schools were requested to report the number of degrees and certificates aggregated by gender and ethnic origin. In reporting ethnic origin the following five categories, as defined by the US Department of Labor, were to be used.

- | | |
|----|---|
| AI | American Indian or Alaskan Native – a person having origin in any of the original peoples of North America, and who maintains cultural identification through tribal affiliation or community recognition. |
| AP | Asian or Pacific Islander – a person having origin in any of the original peoples of the Far East, Southeast Asia, the Indian subcontinent, or the Pacific Islands. This area includes, for example, China, Japan, Korea, the Philippine Islands, Samoa, and Taiwan. The Indian subcontinent includes the countries of India, Pakistan, Bangladesh, Sri Lanka, Nepal, Sikkim, and Bhutan. |
| B | Black, not of Hispanic Origin – a person having origin in any of the black racial groups of Africa. |

Students

- H Hispanic – a person of Cuban, Central or South American, Mexican, Puerto Rican, or other Spanish culture or origin, regardless of race. Only those persons from Central and South American countries who are of Spanish origin, descent, or culture were to be included in this category. Persons from Brazil, Guyana, Surinam, or Trinidad, for example, were to be classified according to their race and not necessarily included in the Hispanic category. Additionally, this category did not include persons from Portugal. These individuals would be classified according to race.
- W White, not of Hispanic origin – a person having origin in any of the original peoples of Europe, North America, or the Middle East.

Additionally, two other reporting categories were also used:

- I International students – all students who were not US (or Canadian for Canadian schools) citizens, permanent residents, or landed immigrants.
- NA Students for whom ethnic information was not available.

Canadian schools were not required to provide ethnic data, although they could elect to do so, but were required to provide totals.

Table II-3-a reports the number of degrees awarded at each program level distributed by gender and ethnic origin. A total of 5,881 bachelor's, master's, post-master's, and doctoral degrees were awarded by ALA schools during 1995-96. Female graduates accounted for 74.3 percent of all degrees awarded. This male/female distribution varies considerably among the different degree programs. From a high of 76.9 percent of ALA-accredited master's degrees and 72.7 percent of doctoral degrees awarded to females, the percentage drops to 54.3, 47.6, and 42.0 percent for the "other master's," post-master's and bachelor's degrees respectively.

The figures in Table II-3-a also show that the graduates of programs offered by ALA schools continue to be predominately White (76.3 percent). Blacks are the largest non-White ethnic group (3.4 percent) followed closely by Asian or Pacific Islanders (3.2 percent). While Blacks were 7.9 percent of recipients of post-master's degrees they received only 1.5 percent of the doctoral degrees granted in the 1995-96.

For each degree program the number of degrees and certificates awarded varied widely from school to school. For the six schools that awarded bachelor's degrees in 1996 (Table II-3-c-1) Syracuse (67) and Pittsburgh (54) conferred the majority (66.9 percent) of the 181 degrees. Only Drexel (37) approached that level.

At the ALA-accredited master's degree level (Table II-3-c-2) four schools, Rosary (213), Texas (212), Simmons (206), and Indiana (202), awarded more than 200 degrees. A total of nine of the 56 schools awarded more than 150 degrees. Five schools conferred fewer than 40 degrees (Alberta, Clark Atlanta, Dalhousie, Puerto Rico, and Tennessee). The 13 schools that awarded "other master's" degrees varied widely in numbers of graduates (Table II-3-c-3). Pittsburgh (76), Syracuse (57), Drexel (55), and North Carolina Central (50) had the majority (79.3 percent) of these "other master's" degree graduates.

Post-master's degree numbers reflect the limited enrollment in these programs (Table II-3-c-4). The number of degrees awarded from school to school varied only slightly except for the 23 graduates at Syracuse. All other schools awarded fewer than ten post-master's degrees and most less than five. The number of doctoral degrees awarded ranged from 11 at Rutgers to one at McGill and North Texas (Table II-3-c-5).

Enrollment by Gender and Ethnic Origin (Table II-4)

Enrollment figures for Fall, 1996 were requested for each of the program levels defined for Table II-1 divided by gender and ethnic origin using the ethnic origin classifications for Table II-3.

Table II-4 is similar to Table II-3 in that both deal with distributions by gender and ethnic origin. However, Table II-3 addressed these distributions for graduates of degree programs while Table II-4 addresses enrolled students. Table II-4-a reports on the number of students enrolled in ALA schools for each program level distributed by gender and ethnic categories. These figures show that students are predominately White (67.7 percent) with Blacks representing the next largest ethnic group (4.2 percent). It is uncertain whether the large number of students for whom no ethnic information is known (3,651) had any effect on these percentages. That would depend upon whether the ethnic distribution of students at those schools that did not provide ethnic data is similar to those that did.

The ethnic distribution of students pursuing the ALA-accredited master's degree is given in Table II-4-c-2 for each school. For the 51 schools that reported ethnic data, the 9,888 White students constitute 78.2 percent of the students in those programs. Black students make up 4.1 percent of that enrollment, roughly a third of the 12.7 percent of the 1997 US population estimated by the US Census Bureau to be Black. Hispanic and Asian or Pacific Islanders each comprise 2.7 percent of ALA-accredited master's enrollment compared to their 10.8 and 3.7 percents respectively of the estimated 1997 US population. Based on the comparison of their percentage of the population to enrollment in ALA-accredited master's programs, students of Hispanic origin are the most under-represented, followed by Blacks.

When the ethnic composition of each school is examined, some interesting distributions are evident. Schools with a higher number of Black students (more than 25) are limited to programs located in historically Black universities (Clark Atlanta and North Carolina Central) and in some of the universities situated in large metropolitan areas (Catholic, Pratt, Queens, and Wayne State). Only South Carolina with 24 Black students has a similar enrollment without having those characteristics. The school with the highest Black ALA-accredited master's enrollment is Clark Atlanta (53). Eleven of the 51 ALA schools (21.6 percent) reporting ethnic data indicated their Black student enrollment was either zero or one. Figures for the 336 Hispanic students pursuing the ALA master's degree are heavily skewed in that 37.2 percent (125) of those students are enrolled at Puerto Rico. Following Puerto Rico, Texas (38) and San Jose (23) have the largest Hispanic enrollments. Three other schools (Pratt, Queens, and South Florida) have more than 15 Hispanic students each. No other school reports more than nine Hispanic students. There are 11 schools with no Hispanic enrollment and another 11 schools with only one Hispanic student each. Taken together these 22 schools account for 43.1 percent of the schools reporting ethnic data.

Obtaining a meaningful analysis of the ethnic distribution of "other master's" and post-master's students (Table II-4-c-3 and Table II-4-c-4) is difficult due to the high percentage of students for whom ethnic data are not available. Although both ALA-accredited master's enrollment figures and doctoral enrollment are influenced slightly by "NA" figures (8.5 percent and 6.4 percent respectively), those "NA" students comprise 31.5 percent of the enrollment of "other master's" students and 41.9 percent of post-master's students. Accordingly, any percentages for ethnic groups would be greatly influenced by whether the "NA" students are, in fact, distributed at the same proportions as those for whom ethnic data has been reported.

At the doctoral level (Table II-4-c-5) the 373 White students constitute 59.3 percent of doctoral student enrollment. The lower percentage of White student enrollment at this level is not accounted for by increased enrollment of other US ethnic groups but rather by the 22.4 percent of doctoral students who are international students. Black students comprise 6.4 percent of doctoral enrollment, Hispanics 2.7

percent, and Asian or Pacific Islanders 2.2 percent. Overall, the involvement of non-White ethnic groups is minimal at the doctoral level. As was the case with the ALA-accredited master's degree, the distribution of non-white ethnic groups among the 21 schools with doctoral programs reporting ethnic enrollment data is uneven. Pittsburgh with 12 Black doctoral students is the only program with more than ten Black students. The schools with the next highest Black doctoral enrollment are Florida State and Rutgers with six students each. No other school had more than three Black doctoral students. Seven schools report enrollment of only one Black doctoral student while seven schools report none. The majority of the 17 Hispanic doctoral students are enrolled in programs offered by schools in the states of Texas and Arizona (Arizona, North Texas, Texas, and Texas Woman's). These states account for 64.7 percent (11) of all Hispanic doctoral student enrollment. The school with the highest Hispanic doctoral representation is North Texas with four students. Beside the programs at these four schools all other doctoral programs had either one or no Hispanic students.

In-State/In-Province and Out-of-State/Out-of-Province Students (Table II-5)

For Table II-5 schools were requested to report the number of students officially enrolled in the Fall 1996 term according to their in-state/in-province and out-of-state/out-of-province status for each of the program levels defined for Table II-1.

Tables II-5-c-1 to II-5-c-7 report enrollments for each program level on a school-by-school basis. At the bachelor's degree level (Table II-5-c-1) information is less than ideal. Because the two schools with the largest bachelor's programs (Pittsburgh and Syracuse) did not identify the geographic origin of their bachelor's students, the "NA" category accounts for 87.8 percent of all the students in bachelor's programs at the eight schools. For the remaining six schools, more than 85 percent of their bachelor's degree students are from in-state.

At the ALA-accredited master's degree level (Table II-5-c-2) the local or regional nature of most schools is reflected. For the 50 schools that reported the requested data, 79.1 percent of their students are from in-state/in-province. Only one school, South Carolina, reports more than half of its ALA-accredited master's students (55.2 percent) are from out-of-state. Six additional schools (Arizona, Dalhousie, Emporia, Kentucky, North Carolina – Chapel Hill, and Rhode Island) indicate that at least 40 percent of their students are from out-of-state/out-of-province. Sixteen schools have less than 10 percent of their ALA-accredited master's enrollment from out-of-state with Kent State, Puerto Rico, and Wayne State below 5 percent. A similar high percentage of in-state/in-province exists overall for "other master's" (72 percent) and post-master's (84.5 percent) degree programs.

At the doctoral level (Table II-5-c-5) the mean percentage of students in an in-state/in-province status is somewhat lower (62.4 percent). For this degree, of the 21 schools that provided data, four schools (Alabama, Indiana, McGill, and Wisconsin – Madison) have at least 50 percent of their enrollment from out-of-state/out-of-province and a total of 11 schools have at least 40 percent in that status. Six schools report less than 20 percent of their doctoral students are from out-of-state/out-of-province with three (British Columbia, Tennessee, and Wisconsin – Milwaukee) having no students in that category.

International Students (Table II-6)

For Table II-6 schools were requested to indicate the number and gender of their international students for each of the program levels defined for Table II-1.

The 841 international students at all program levels, when compared against the enrollment figures reported in Table II-1, constitute slightly more than 4 percent of students attending the 56 ALA schools. When individual program levels are examined, ALA-accredited master's programs are found to have slightly over 3 percent of their students from other countries. A major change in international student demographics occurs for other programs offered by these schools. The 174 international students pursuing "other master's" degrees make up nearly 15 percent of that enrollment and constitute almost 19 percent of post-master's enrollment. This increased presence of international students is even more pronounced at the doctoral level where international students comprise nearly a quarter (22.8 percent) of doctoral student enrollment.

International Students' Country of Origin (Table II-7)

For Table II-7 schools were asked to report the country of origin of their international students for each of the program levels defined for Table II-1.

In previous years, country of origin data were presented in an alphabetical listing by country. In this year's report, these data are arranged first by continent then sub-arranged alphabetically by name of the country (Table II-7-a-1). Asia, covering a wide area of the world ranging from the Middle East to the Far East, has been further sub-divided into four regions to allow for more detailed analysis.

As might be expected, international students at ALA schools represent all continents except Antarctica. Asia is the continent that accounts for the majority of international students providing nearly three-fourths (70.4 percent). When the regions of Asia are examined, the Far East/Southeast Asia region is found to contribute the greatest percentage of international students (54.1 percent). South Asia is a distant second with 10.3 percent. Africa continues to have minimal representation in LIS programs with only 3.8 percent. Equally small is South America with 2.5 percent.

When the number of students from individual countries is examined, it becomes readily apparent that China and Taiwan are the countries providing the greatest number of students (138 and 102 respectively). Two other countries, South Korea and India with 73 and 72 students from each, form the next tier of countries of origin. Taken together, these four countries contribute nearly half (45.8 percent) of all international student enrollment. Although China provides by far the most students pursuing the ALA-accredited master's degree, Taiwan has considerably more students enrolled in "other master's" programs and South Korea has noticeably more doctoral students studying in ALA schools than any other country.

Enrollment by Age and Gender (Table II-8)

For Table II-8 schools were asked to report Fall 1996 enrollment divided by gender across eight age groups for each of the program levels defined for Table II-1. Additionally, one school reported enrollment for students under 20 years of age so one another age group (<20) was added to the tables.

Table II-8-a-1 provides a summary for all program levels by age group and gender. Although the data in this table are incomplete due to the rather large number of schools that were unable to provide age data (25 percent of the students could not be classified by age), they nonetheless provide some insight into the age distribution of students at ALA schools. For the ALA-accredited master's and "other master's" programs, the 25-29 age group has the greatest number of students followed by the 30-34 age group. This pattern is true when the figures for males and both genders are totaled. For females, however, the age

Students

group with the second highest frequency is the 40-44 age group at the ALA-accredited master's level and the 20-24 age group for the "other master's" category.

Post-master's occur at their highest frequency in the 40-44 age group followed by the 45-49 group. This pattern is true for these students overall and for females but does differ for males. Male post-master's students distribute more evenly across the 25-54 age groups with the 30-34 group having the highest frequency. This different distribution for males does not affect the overall distribution due to the greater number of females in these programs. Doctoral students, both male and female, are quite evenly divided among the four age groups for ages 30-49. For females, however, the age group with the highest frequency is the 45-49 compared to the 30-34 highest frequency age group for males.

New to this report are tables providing a school-by-school distribution of students by age groups with gender distributions and totals for each program level (Table II-8-c-1 to Table II-8-c-7).

Students by Gender and Highest Degree Held (Table II-9)

This table is not currently in use. The table was last used in 1980.

Students by Undergraduate Major, Gender and Program Level (Table II-10)

This table is not currently in use. The table was last used in 1980.

Scholarship and Fellowship Aid (Table II-11)

Data for the number and amount of scholarship or other non-work-related financial aid awarded in fiscal year 1995-96 were requested for each of the seven program levels as defined for Table II-1. Each school was asked to separate the data by the gender of awardee. The instructions for compiling the data stated that awards directly administered by the school (regardless of whether the funds were from the school, the parent institution, federal or non-federal external sources) were to be included but awards (including assistantships and work/study) made by outside sources directly to the student were to be excluded.

In past statistical reports some tables reported overall totals and the mean values of awards divided by gender. In this year's report those same data are reported but additional breakdowns of some totals are also supplied. Given the difference in the value of the Canadian and US dollars, separate means are provided for Canadian and US schools. Similarly, with the costs associated with enrolling in a public university generally being quite different from those at a private university, it may not be unreasonable to suspect that the amount of financial aid awarded by these different types of schools would also be different. Accordingly, for US schools, separate means are reported for public and private universities as well as a combined mean.¹

Table II-11-a provides a summary of aid awarded for each of the seven program levels for the 1995-96 fiscal year. Given the heavy investment schools make in their doctoral programs it should come as no surprise that slightly more than a quarter (26.4 percent) of all aid awarded goes to doctoral students

¹ The following nine universities were defined as private: Catholic, Clark Atlanta, Drexel, Long Island, Pratt, Rosary, St. John's, Simmons, and Syracuse. Some schools treated as public have a quasi public/private relationship. For the purposes of this report, if such a school had different tuition levels for in-state versus out-of-state students it was classified as a public university.

even though they account for a far lower percentage of students in ALA schools (3.3 percent of all students; 4.2 percent of all degree seeking students). The average doctoral award is \$10,320 compared to \$3,378 for ALA-accredited master's program students and \$4,758 for "other master's" students. The nearly \$1,400 difference in average awards for the two master's programs is notable, although potentially skewed given the number of schools (10 of 17) that did not report scholarship or fellowship aid for their "other master's" program.

Table II-11-c-2 reports scholarship and fellowship aid for the ALA-accredited master's degree. The mean number of awards given by Canadian and US schools is very similar (22.6 vs. 21.8 respectively), although the mean amount awarded is slightly over \$2,500 more per US school. The most notable difference in the mean figures on this table is the mean number of awards given by private US universities (38.9) versus public (18.3). The higher cost of private school education likely necessitates funding a greater number of students per school. Although the mean number of dollars used to fund scholarships and fellowships is \$35,407 more per private school, when evaluated against the number awarded per school, the value of an average award at a US private university is less than at a US public university (\$2,665 versus \$3,736).

The figures in Table II-11-c-3 for Other Master's is perhaps most informative for the number of schools that did not report any scholarship or fellowship aid for students pursuing these degrees. Only seven of 17 schools (41.2 percent) indicate any funding for these students. The situation for financial support of post-master students appears to be even more severe in that only four of the 26 schools (15.4 percent) with a post-masters program indicate that they provide scholarship or fellowship support (Table II-11-c-4).

Table II-11-c-5 reports on scholarship and fellowship aid for doctoral students. The most notable difference in the mean figures on this table is the mean number of awards given by US private universities (11) versus public universities (8.3). The funding for the ALA-accredited master's degree shows that the mean value of awards per private university was greater than those at public universities, although the mean funding per student at private universities was lower. For doctoral students the mean amount used to fund scholarships and fellowships is \$66,482 more per private school and, when the number awarded per school is taken into consideration, private university funding also is higher per student (\$3,547) than at a public university (\$13,682 versus \$10,135).

Assistantships (Table II-12)

Fall 1996 data were requested for the number and value of assistantships awarded by each school, divided by gender of awardee, using the program level definitions of Table II-1.

Similar to the reporting for Table II-11 the presentations of Table-II-12 include a calculation of separate means for Canadian and US schools with a further division of US schools into public and private.

Table II-12-a provides a summary of assistantships awarded for each of the seven program levels. Unlike scholarship and fellowship aid where doctoral students received slightly more than a quarter of that aid, doctoral students account for only 15.2 percent of assistantship funding. Also, unlike scholarship and fellowship aid where the average size of a doctoral award is more than three times the size of the average award made to an student in an ALA-accredited master's program, the average doctoral assistantship is only \$2,459 more than the average ALA-accredited master's program assistantship (\$8931 versus \$6471 respectively). This would appear to indicate a pattern of making more sizeable awards to doctoral students in the form of scholarships and fellowships rather than through assistantships. It is also

Students

noteworthy that the mean value of an assistantship given to an “other master’s” student is \$12,388 -- \$5,917 more than the value of an average award given to the ALA –accredited master’s program student. A similar mean figure (\$12,418) exists for post-master’s students. These two figures may be heavily skewed, however, given the number of schools that did not report Other Master’s (9 of 19) or Post-Master’s (6 of 26) assistantship funding.

Table II-12-c-2 reports assistantships awarded to students in ALA-accredited master’s degree programs. The mean number of awards given by Canadian and US schools is quite different (6.3 vs. 17.2 respectively), unlike the nearly equal mean number of awards for scholarships and fellowships. Scholarships and fellowships were awarded at a far higher number by US private schools compared to US public schools (mean 38.9 vs. 18.3). The reverse is true for assistantships where US public universities awarded an average of 18.9 assistantships per school compared to 8.4 for US private schools. This difference may be due to a higher level of endowment funds for scholarships and fellowships at private universities although no data were collected to support this conjecture. The mean value of an assistantship awarded per Canadian school is \$1,943 compared to \$6,710 for US schools (\$6,571 public; \$8,274 private).

The figures in Table II-12-c-3 for “other master’s” degrees, as was the case with scholarship and fellowship aid, is perhaps informative for the number of schools that did not report any assistantship figures. Only nine of 19 schools (47.4 percent) indicate any funding for these students. Again, as for scholarship and fellowship aid, assistantship support of post-master students is extremely limited with only six of the 26 schools (23.1 percent) that have a post-master’s program indicating they provide assistantships (Table II-12-c-4).

Table II-12-c-5 reports the number and value of assistantships awarded doctoral students. Canadian schools report awarding a greater mean number of assistantships per school than do US schools, however, the value of the average assistantship at a Canadian school is considerably lower -- \$3,925 compared to \$9,272 at US schools. There is a sizeable difference in the value of assistantships between US public and private universities. Doctoral assistantships at US public universities average \$8,803 contrasted with similar awards at private universities which average \$14,269. This difference between public and private assistantship funding is similar to that observed for doctoral scholarships and fellowships.

Tuition and Fees (Table II-13)

Tuition and fee data for the 1996 Fall term were requested. These data included

- total cost of a degree obtained without transfer credit
- cost of tuition for only one credit

In reporting fees schools were asked not to include those associated with particular courses or labs. Data were requested separately for in-state/in-province and out-of-state/out-of-province students for each of the seven program levels defined for Table II-1.

Table II-13-c-2 presents the full degree and one-credit costs for the ALA-accredited master’s degree. Differences between in-state and out-of-state charges are valid only for public universities in the United States. Private universities charge the same fee regardless of residency status. As expected, the cost for the degree is generally higher at private schools with a mean cost of \$18,231. The least expensive ALA-accredited master’s programs at private universities are provided by Clark Atlanta

(\$12,960) and Rosary's program at the College of St. Catherine's (\$13,864). The most expensive are offered by St. John's (\$20,025), Pratt (\$21,436), Catholic (\$21,630), and Drexel (\$23,732).

Seven schools (Arizona, Hawaii, North Carolina Central, North Carolina – Greensboro, Oklahoma, Texas Woman's, and Wisconsin – Madison,) are able to offer the ALA-accredited master's degree to in-state students for under \$3,100. All seven are well below the mean in-state cost for that degree at a public US university (\$5,723). The most expensive programs for in-state students are at Michigan, Pittsburgh, and Washington with costs ranging from \$10,092 to \$18,914.

For out-of-state students six US schools (Hawaii, North Carolina Central, Oklahoma, Southern Mississippi, and Wisconsin – Madison) provide their ALA-accredited master's program for less than \$9,000. Public US universities that have out-of-state tuition and fees exceeding \$20,000 are California – Los Angeles, Michigan, North Carolina – Chapel Hill, Pittsburgh, and Washington. Of these, California – Los Angeles and Michigan have costs more than \$10,000 higher than the other more expensive programs – well above the mean cost of this degree for both out-of-state students at US public universities (\$14,291) and students at private universities (\$18,231).

Table II-13-c-5 provides tuition and fee information for a doctoral degree. Schools were requested to report only the cost for course work. The mean cost to an in-state doctoral student at a public US university is \$10,211. The least expensive programs for in-state students are provided by Texas Woman's (\$3,500) and Florida State (\$3,785). In-state doctoral students encounter the highest costs at Illinois (\$21,852) and Michigan (\$28,236). For out-of-state students, the doctoral program with the lowest cost is also at Texas Woman's followed by Emporia, Texas, Florida State, and Alabama all with tuition and fees below \$13,000. The most expensive programs for out-of-state doctoral students are at Illinois (\$52,830) and Michigan (\$57,090). These costs are well above the out-of-state mean for US public universities (\$23,795).

Again, programs at private US schools are considerably more expensive than similar programs at most public universities. Only three of the 23 doctoral programs in the US are offered by private universities. Their mean cost is \$27,540, with a range from \$19,656 at Simmons to \$39,234 at Syracuse.

When both Canadian and US doctoral programs are considered the most expensive program overall is offered at Toronto with a cost to out-of-province students of \$88,000.

1. Washington — The FTE formula used is 1 credit hour equals .1 FTE, e.g., 9 credit hours equals 0.9 FTE, 10 credit hours equals 1.0 FTE, and 12 credit hours equals 1.2 FTE. Thus, the FTE for full-time students can be larger than the head count of students.
2. Excludes Michigan.

1. Alberta — One distance education course is offered.
2. Clarion — Students may enroll until the evening of class.
3. Emporia — The number of students is 162. These figures reflect enrollment as of September 26, 1996. Regional students will actually enroll in more courses this semester because they enroll on a course-by-course basis.
4. South Florida — The increase in off-campus FTE is owed in part to the delivery of courses through the Internet (email and www). Students registered in these classes have been counted as Off-Campus.
5. Syracuse — Of the 7.25 FTE students, 5 are in Endicott, and 2.25 are in Washington, D.C.
6. Includes only those schools with off-campus enrollment.

1. British Columbia — Tabulation not inclusive of professional experience and thesis courses.
2. Wayne State — Number of courses with 6-10 students enrolled includes the multiple course numbers for practicum courses, since seminars meet as one course.
3. Excludes Long Island.

Table II-2-a-2
ALA Schools
Courses or Sections of Courses with the Number of Students Enrolled Above 50
Fall 1996

Buffalo	Required, basic core course, LIS 505, which must be taken by all new students in the first semester.
California – Los Angeles	Core course that all entering students must take. This consists of a 3-hour lecture that meets one day a week and four discussion that meet one day a week for one hour.
Illinois	Lecture section of a required course. It also meets in six discussion sections in the 21-25 range.
McGill	Four mandatory courses for first year students and one elective course.
North Carolina Central	New required course.

Rutgers	501 — The LIS Orientation class held each semester for all new incoming students. 502 — The LIS Colloquium Series — taken by all MLS students during one semester in the program. 510 & 550 — Designed to be large lecture classes. 550 has lab component which is broken down into smaller segments.
Simmons	Experimental courses.
South Carolina	Two required courses on campus, two required courses televised in SC, one elective course televised in SC and Maine (Maine section greater than 50).
Syracuse	All are undergraduate classes and professors are assisted by teaching assistants. One class enrolls 87 students, others all fall between 50 and 60.
Texas	Two of the courses are undergraduate Children's Literature courses. The other one is a core course (Introduction). The school has two sections of Introduction and one is limited by size of the TV studio to 25.
Toronto	Core and/or Required courses which students enrolled in all three areas of specialization must take.
Washington	Three required core courses.
Wisconsin – Madison	Due to temporary reduction of teaching faculty, the number of sections for required course was reduced to single lecture.

General Notes for Table II-3 data

When interpreting the numbers in the tables that follow, it should be noted that the Canadian schools were not required to supply information on the ethnic origin of their students. Two of the seven Canadian schools (Dalhousie and Montréal) elected the option of supplying these data. As a result, the means calculated reflect only the schools in the United States and these two Canadian schools. For a few tables it was clear that some US schools also were unable to provide these data and they were also not included in the calculation of means.

Table II-3-a

General Notes for Table II-4 data

When interpreting the numbers in the ethnic categories, it should be remembered that the Canadian schools were not required to supply information on the ethnic origin of their students. Two of the seven Canadian schools (Dalhousie and Montréal) elected the option of supplying these data. As a result, the means calculated reflect only the schools in the United States and these two Canadian schools. For a few tables it was clear that some US schools also were unable to provide these data and they were also not included in the calculation of means.

A number of schools were unable to supply ethnic data for students in each program they offered. While often having these data available for programs offered within their schools they frequently lacked the data for the categories of "Other Graduate" and "Other Undergraduate" which represent students from other programs within their university. Although means have been calculated for these tables, the number of schools excluded from these calculations results in the need for some caution in using those numbers.

Additionally, several schools did not report any international student enrollment for Table II-4 but indicated the enrollment of international students in Table II-6 and Table II-7, e.g., Michigan, Wayne State.

General Notes for Table II-5 data

A number of schools were unable to supply information on their in-state/in province and out-of-state/out-of province status of their students, instead reporting the information as "NA." In some cases, the numbers in these tables for those schools were taken from the data reported by them for Table II-1. Although total percentages for these tables have been calculated, the number of schools who have a sizeable number of their students in the "NA" column alters the percentages, thus some caution should be taken when using those figures.

Table II-5-a

General Notes for Table II-6 data

When reviewing the data provided in the II-6 tables, it should be noted that a number of schools that indicated they have enrollment at a program level did not submit any data for international students for that program. In preparing the tables an assumption has been made that there were no international students in that program and thus a "0" has been entered in the appropriate table cells. It is possible that some schools do have international students but their records do not allow them to identify which students are international. This is particularly true for the program levels "Other Graduate" and "Other Undergraduate". If this is the case, the assumption made for that school is incorrect and the correct entry should have been "-----". This incorrect assumption could have a bearing on Total and Mean values.

Table II-6-a

* When interpreting the data from this table please note that not all schools that offered these degree programs were able to report on the international status of their students. This is particularly true for the program levels of Other Graduate and Other Undergraduate.

1. Canadian students at U.S. schools
2. U.S. students at Canadian schools.

Total (n = 1) ¹	0.00	\$0.00	3.00	\$1,100.00	3.00	\$1,100.00

1. Includes only Clarion.

2. Most schools that offer a bachelor's degree did not report any scholarship or financial aid information for that level. It is likely that the non-report reflects no aid awarded rather than non-reported. Consequently, if the "-----" were to be replaced with zeros the mean figures for aid at the bachelor's level would be very different.

1. Only includes Alabama, North Carolina -Chapel Hill, Pittsburgh, and Syracuse.
2. The majority of schools that offer post-master's degrees did not report any scholarship or financial aid information for that program level. It is likely that the non-report reflects no aid awarded rather than non-reported. Consequently, if the "-----" were to be replaced with zeros the mean figures for aid at the post-master's level would be very different.
3. Only includes Alabama, North Carolina -Chapel Hill, Pittsburgh, and Syracuse.

4. Only includes Alabama, North Carolina -Chapel Hill, and Pittsburgh.
5. Only includes Syracuse.
6. Only includes Alabama, North Carolina -Chapel Hill, Pittsburgh, and Syracuse.

General Notes for Table II-13 data

When reviewing the data provided in the II-13 tables, the following comments provided by individual schools should be considered:

Alberta	Data reported in the In-State and Out-of-State columns are for In-Canada and Out-of-Canada. Foreign students pay a 100% differential fee. The data reported in the columns for One Credit are for a 3 unit course.
Arizona	The actual cost for tuition in the state is \$0.00. In-State students are responsible for registration fees only. In calculation the actual cost for the full degree; the registration fees were used for in-state, both tuition and registration fees were used for out-of-state students.
Catholic	In-State and Out-of-State were treated as On-Campus and Off-Campus respectively. Full-time students are charged the same rate on- and off-campus.
Dalhousie	Data reported in the In-State and Out-of-State columns are for In-Canada and Out-of-Canada.
Illinois	Data reported for One Credit include 0.5 to 1.5 units (2-5 hours).
McGill	Data reported in the In-State and Out-of-State columns are for In-Canada and Out-of-Canada. All courses are 3 credits or multiples (i.e., 6 or 12). No 1 credit course is possible. The data reported in the columns for One Credit are for a 3 credit course. A 1 credit charge for tuition only is \$55.61 for Canada and \$248.61 for international students.
Rhode Island	Cost for a regional out-of-state student is \$329 for one credit, \$12,108 for full degree.
Wisc. Madison	There is a 2 credit minimum for registration.
