
This paper reports on how archives employ electronic finding aids and other online resources to provide access to labor history materials. It includes an annotated listing, or webliography, of fifty-five repositories with distinct or significant holdings in labor history that have Web sites. The webliography illustrates great diversity in site features, structure, and function. A survey of a cross-section of archival professionals provides information unavailable from analysis of the Web sites. Questions emphasized collection development, the creation and use of online description, and ongoing or future projects. Fifteen archivists participated in the survey. The survey revealed that collection development has slowed since the 1960s and 1970s with more emphasis on corporate business collections. Web authoring skills remain mainly self-taught, or borrowed from other staff and outside agencies. Nearly all of the archivists who responded claimed their Web sites had expanded interest in and use of their labor collections. Finding aids remain a priority in developing online resources, and the use of Encoded Archival Description continues to grow, albeit slowly.

Introduction

In the past decade, many archivists, like their librarian colleagues, have embraced the “information revolution,” particularly the Internet and the World Wide Web. Most institutions emphasizing labor history collections have, at the very least, a Web site including an overview describing or listing their holdings. Some, particularly the larger, more comprehensive depositories, post detailed finding aids or collection guides online.

As yet, no detailed or complete webliography exists of labor history archival resources online. Descriptions of labor archives in print predate the explosive growth of the Web (Labor History, 1982, 1990; Leab and Mason, 1992; Lewinson and Rieger, 1962). More recent listings on the Web contain URLs, but only offer description of holdings, not an analysis of Web sites and the availability of electronic finding aids and digitized collections (SAA, 1992). Moreover, some institutions with significant collections are not included. Scholarly narrative and analysis of the process accompanying the creation and uses of online archival resources have appeared in recent years (Craig, 1998; Williamson and Henderson, 1999; Duff and Johnson, 2002; Turnbull, 2002; Yakel, “Impact,” 2002; Tibbo, 2003). Yet the problems and opportunities associated with digital resources posed in labor archives specifically remain unexamined (Dublin. 2002).
This paper is an effort to help fill the gap. It includes an appended webliography for archives that emphasize labor collections. It will also report the responses of archivists to queries concerning collection development, creating online materials, the uses of these resources, and future directions. Some conclusions concerning the current state of online resources within labor archives are drawn from information gathered in the webliography and the responses of the archivists surveyed. Labor archives, like the historiography of American workers, continue to evolve within changes in society.

Since the 1960s, many American historians followed the example of their European colleagues and placed more emphasis on the experience of everyday people in our past. The “New Social History” focused on the roles of women, minorities, immigrants, and the American working class. Institutional studies of labor organizations were nothing new, but a “New Labor History” emerged which owed much to earlier scholarship on American unions (Dubofsky, 1985).

Despite the advent of a “New Labor History” in the 1960s, historians interested in American workers still rely, in large part, on records generated and kept by labor organizations. Many archival institutions throughout the United States possess large labor collections primarily made up of union records. Union membership and power in America may rise and fall, but labor historians remain dependent on labor archivists.

Labor archives face challenges shared by other repositories, such as funding and the preservation of digital records. Like business archivists, they must deal with ongoing merger activity, establishing new partnerships, and
justifying their existence as an expense with intangible benefits beyond revenue potential (Quigel, 2002). The best way to demonstrate value is to document and increase usage.

Librarians have realized the importance of increasing their user base and have embraced information technology. Are archivists, and labor archivists in particular, using technology to provide widespread access to their materials? Have they created a strong online presence for their collections? This paper evaluates the online resources of a broad cross section of institutions with significant labor collections and asks the following questions. Why do some, and not other, labor history archives emphasize digital access? What factors influence the creation of online resources? How have users reacted to such information (or a lack thereof) on the Web? Where will labor archivists concentrate future efforts in expanding their Internet presence?

For the purpose of the present study, labor history archives includes those archival institutions that possess and emphasize collections from American labor unions or individuals and institutions associated with the American working class. Some are very well known as labor repositories, others are not. Many repositories contain a related collection or even a few, but these will not be considered. See Appendix A for the webliography of institutions and sites examined.

This paper defines labor history archives that emphasize digital access as those that maintain a “deep” Web site (beyond a simple introductory page) with elements such as detailed descriptive overviews of collections, online finding aids
encoded to facilitate Web searching, digitized materials available online, and e-mail reference services. Most institutions have at least a minimal online presence; relatively few have fully exploited the potential of new technology, at least not yet. This study explores the factors that differentiate those archives emphasizing digital access from those that have not yet entered into this arena. Not surprisingly, institutions with large labor collections or a large number of labor collections naturally seek to publicize their assets and many are using the Web to accomplish this. This paper explores how they are exploiting information technology and how this activity compares to developments in other repositories.

Literature Review

Archives & Technology

A large, if relatively recent, body of scholarly publications accompanies the general topic of archives and technology. A search on March 15, 2004 of these terms paired in the Library and Information Science Abstracts database returned 487 items. Perhaps 20 of these appeared related to this project in terms of labor archives specifically, and more generally, archival description on the Web. Much of this literature concerns the potential benefits and problems of digitization. Many articles, for example, address enhanced access and the complexity of digital preservation (Turnbaugh, 1997; Hofacket and Lund, 1998; Ghetu and Studwell, 2002). Others assess the progress that has been made and the obstacles yet to be overcome (Glazier, 1994; Cadell, 2002; Ford, 2003). Many
archivists contribute narrative case studies of their own projects (Williamson and Henderson, 1999; “University of Southern Mississippi,” 2001; Turnbull, 2002).

Most of these articles appear informative and useful, but offer little in the way of a comprehensive analysis or research on the archival uses of computer technology. That much change has taken place, there is no doubt. It was only the 1970s when NARA completed the arduous task of indexing the Presidential Papers in the Library of Congress to be followed by the Papers of the Continental Congress. The tools, initially produced on magnetic tape typewriters and punch cards, seem primitive only a quarter-century later (Torchia, 1976).

By 1992, still early in the digital age, archivists had created a database of series descriptions for the Vatican Archives (Blouin, 1992). In less than a decade, following the spectacular growth of the World Wide Web, innovations such as Encoded Archival Description opened the possibility of item level description available to anyone, anywhere, anytime on the Internet (Sweet and Thomas, 2000). The following year, Helen Tibbo and Lokman Meho could test the efficacy of a variety of search engines in locating the growing number of finding aids on the Web (Tibbo and Meho, 2001).

Technological innovations are radically altering the work of the archival profession, almost always with the objective of making more information available to more users. It is important that archivists assess the needs of those who enter their virtual, as well as physical, portals. User studies, long employed by librarians, can help archivists describe who uses their resources, why these resources are sought, how such resources are used, where users look for
resources, and what resources are used or not used. Any analysis of online archival resources must consider what has been learned from such studies on the virtual use of archives.

**User Studies on Archives & the Web**

Tibbo and Meho, among others, joined Hugh Taylor in calling for user studies to determine the wants and needs of researchers in the new environment created by the information revolution (Taylor, 1991-1992; Michelson and Rothenberg, 1992). Paul Conway had earlier outlined the process for archivists, and then demonstrated the value of onsite user surveys at the National Archives (Conway, “Facts,” 1986). Wendy Duff and colleagues have followed up with behavior studies of researchers working in the physical archives (Duff and Johnson, 2002; Toms and Duff, 2002). But the virtual user is something altogether new.

Barbara Craig reminds archivists that growing numbers of users, “conditioned” by the Internet, expect easy, fast answers. Craig views this as an opportunity to expand the base of users as well as a challenge to the profession. She notes that the most impatient patrons will likely be those new and uninitiated to traditional archives (Craig, 1998). Amateur genealogists, emboldened by the Web, already outnumber academic historians and the imbalance seems likely to grow (Duff and Johnson, 2003). And what of the latter? What are the expectations of historians? Do they need or want such ease of access? Do they use the digital resources that are already available?
Kristina Southwell’s work on locating manuscript sources at the University of Missouri identified the Web as one resource among many for historians (Southwell, 2002). Tibbo’s recent study focuses more closely on Web use among university history faculty (Tibbo, 2003). She reveals a mixed picture. Predictably, younger professors seem to rely on it more and archives’ Web sites are a more common source of information than search engines. Also, these academics are more likely to click on a site to contact a known repository than to seek potential sources. This indicates that historians still get their initial information about an archive through word of mouth and print sources such as citations in monographs. Still, two-thirds of the professors surveyed indicated some use of the Internet for current research projects, if only for a repository’s contact information. Tibbo reminds us this is significant considering the Web, for practical research purposes, is less than a decade old (Tibbo 2003, p. 28).

Despite the efforts of pioneer archivists, most of the faculty Tibbo surveyed remains ignorant of online finding aids. Some still use NUCMC in print despite the widespread availability of the ArchivesUSA database. It is the responsibility of the archivists to inform their patrons of the available resources and to establish themselves as ready and willing to help.

Tibbo notes archivists must remember their “Web site is the virtual front door and a very visible reflection of any repository (Tibbo, 2003, p. 29).” Most archives and special collections in academic libraries do have Web sites with some description of holdings. Many post detailed collection guides in HTML format. A growing number of repositories are encoding at least a few finding aids
in Encoded Archival Description, a document type definition of the XML encoding language. The availability of EAD guides and software are making the move to XML easier (Tibbo, 2003, p. 11).

Despite the excitement surrounding the new format in the archival profession, few of Tibbo’s respondents knew they had utilized EAD finding aids, and most thought they definitely had not (Tibbo, 2003, p. 27). Ninety per-cent remained users of print finding aids, with only a slim majority having made any use of electronic tools to locate specific collection inventories (Tibbo, 2003, p. 26). Still, as a new and younger cohort of academics emerge, these proportions are likely to shift. Tibbo suggests the results of her survey would be very different in another five to ten years (Tibbo, 2003, p. 14).

Usability, as well as use, also sparks scholarly inquiry into archival resources on the Web. Elizabeth Yakel suggests access does not necessarily translate into accessibility. Researchers may learn to use tools for one depository, largely through trial and error, but may be forced to repeat the process, again and again, at other archives. One problem is unfamiliarity with archival principles, particularly arrangement (Yakel, “Impact,” 2002).

While Yakel advocates archival education for users, she also proposes “listening” to them, finding out how they search and adapting archival tools to their needs (Yakel, “Listening,” 2002). Dennis Meissner and Anne Gilliland-Swetland emphasize the “reengineering” of finding aids to “exploit” the searching potential of Encoded Archival Description (Meissner, 1997; Gilliland-Swetland, 2001). The not always so obvious point is to describe and encode with the
needs of the user in mind. Too often, Gilliland-Swetland suggests, archivists focus on the materials almost exclusively (Gilliland-Swetland, 2001, p. 201).

Christopher Prom has listened to a wide variety of archives patrons in an as yet unpublished study of search interfaces (Prom, 2004). Prom concurs with those information technology scholars whose findings indicate that “domain knowledge” (in this case, of archives), while clearly helpful in effective searching, may not be as significant a factor for success as “systems knowledge” of search techniques, databases, etc. (Prom, 2004, pp. 4, 34-36). Prom offers suggestions for improving interfaces to help both novice and expert find manuscript collections and search within them.

Simplicity is the key; archival interfaces with multiple options only confused his user subjects (Prom, 2004, pp. 41-46). Prom recommends we take a hint from the genealogists and utilize alphabetical lists of names (Prom, 2004, p. 40). He breaks from the trend toward left-side navigation bars, claiming users favor the page-top table of contents (Prom, 2004, pp. 49-50). Prom also emphasizes the utility of single-page and collection level search options (Prom, 2004, p. 50). While uniformity tends to evolve over time, it remains to be seen if the simplicity Prom advocates will prevail in archival Web sites.

User studies provide archivists with a mix of, if not mixed, signals. Users appear alternately Web savvy, yet unaware of helpful research options. Archivists embrace information technology for greater access for users, but too often remain focused on collection holdings, not the patron. Nonetheless, the
user study remains indispensable as the best tool in determining the needs and
wants of the community.

**Labor Archives**

We have no user studies for the online resources of labor archives or, as
noted, a compendium of available “virtual” information. Archivists have, however,
made efforts to assay the scope and state of the physical holdings in labor
repositories. As early as 1960, Paul Lewinson and Morris Rieger of the National
Archives and Records Administration directly surveyed administrative staff in
American unions on the age and continuity of their records. While 118
organizations, including the AFL-CIO, responded to their queries, this
represented only a 55% return rate. Unfortunately, the non-responses included
some of the largest American trade unions (Lewinson and Rieger, 1962, pp. 42;
45).

Lewinson and Rieger’s notes include comments returned with the detailed
questionnaire and help explain the failure of the survey to win more cooperation
(Lewinson and Rieger, 1962, pp. 52-57). A fear of outsiders opening a wedge
into their internal business reflects a siege mentality among unionists then in the
shadow of Taft-Hartley. Also, in an effort to keep the survey uncomplicated in
hopes of more participation, questions tended to be vague and confusing. Many
union records managers indicated they simply were not sure what information
Lewinson and Rieger wanted and returned incomplete questionnaires (Lewinson
and Rieger, 1962, p. 43). The authors called for a more careful, more “intense”
effort in the future (Lewinson and Rieger, 1962, p. 44). One might also suggest
they ask professional archivists, not union staff, for a response. In 1960, however, few unions had joined with archives in a formal depository relationship.

Over forty years later, Tom Connors reported equally mixed results. Since the publication of Lewinson and Rieger's findings, repositories have undergone tremendous growth. Yet flush decades of acquisition followed by budget tightening left many records unprocessed. As early as 1980, labor archivists met to recommend in-house records management programs within the unions, and a "clearing house" for archivists to determine the location and scope of materials (Connors, 2002, p. 86).

Connors became involved in one such effort, the ambitious Labor Archives Project of 1995-1997 (Connors, 2002, p. 87). Connors, from the University of Maryland, joined Les Hough of the Reuther Library, Lee Sayrs of the Meany Archives, Julia Marks Young of the Southern Labor Archives, and Debra Bernhardt of the Wagner Archives in an effort to coordinate activity and exchange information among these and other institutions. Although "one long-term goal" was to "explore enhanced electronic access to labor archives," Connors does not bring this point up again. The LAP's main priority became "a pilot project to develop guidelines for the management of historically significant electronic records created by labor organizations," a pressing issue for archivists and records managers in general (Connors, 2002, p. 89; Conway, Preservation, 1996).

As with Lewinson and Rieger's earlier effort, however, the initial survey process stymied the Labor Archives Project. In this instance, the problem may
have been an overly detailed, lengthy questionnaire that produced incomplete responses (Connors, 2002, pp. 89-93). While the “picture derived” seemed “fleeting,” it encouraged creation of an “LAP II” concentrating on the ten largest repositories and featuring fewer questions (Connors, 2002, pp. 97; 98).

Bernhardt also suggested an ongoing “Labor Documentation Action Network” for co-operation among archivists. More recently, however, Connors indicated that occupational moves by some of the participants and the death of Bernhardt have sidelined these initiatives (SAA, 2003 LAR, 2003).

Thomas Dublin, labor and social historian at SUNY Binghamton, is more upbeat about the state of labor resources on the Web. His 2002 article in the journal Labor History concentrates on the plethora of educational sites and exhibits now available. Good examples are the Shirtwaist Fire site from Cornell, the Emma Goldman Papers from UC Berkeley, and the “Like a Family” material found in UNC-CH’s ibiblio database (Dublin, 2002, pp. 347-49). He also enthusiastically notes the manuscript guides available from labor archives at NYU, Cornell, Wayne State and the Meany Center (Dublin, 2002, pp. 350-51). Essentially, the article is a survey of his favorites on the growing Web, not a detailed inventory of archival resources for scholars.

In 1980, long before the Web, Philip Mason of Wayne State University “appended” a “wide-ranging bibliography about labor archives in the United States” to a short article on the subject (Mason, 1980). Two years later, Labor History’s managing editor Daniel Leab devoted much of the journal’s fall issue to thirteen essays on various labor archives across the nation with an introduction

Leab notes in his introduction that no uniform format was imposed on the contributors, generally archivists of the institutions, save the inclusion of contact information. Most note the origins of the archives, its special strengths in holdings, and outline the general scope and content of the collections. Mason’s essay comments on the challenges presented by digital records, but of course nothing could yet be said of online resources in 1992.

Recent developments concerning labor archives include changes in the relationship between unions and depositories, particularly as organizations and established relationships disappear in union mergers (Quigel, 2002). Most writings, however, concern updates of existing collections or descriptions of new acquisitions (*Labor History*, 2000; 2001). A successor to Leab and Mason’s book appears overdue; perhaps it is assumed archival Web sites will serve in lieu of a collection of essays in print.

Also in the early 1990s, Debra Bernhardt assembled a directory for the Labor Roundtable of the Society of American Archivists. It remains linked to the SAA site and is maintained by Patrizia Sione of the Kheel Center at Cornell. Archives that responded to queries for inclusion also contributed capsule
descriptions of their holdings. URLs are included for almost all of the institutions represented, and email addresses as well (SAA, Directory, 1992).

There does not appear to be a comprehensive list of labor archives in the United States. The SAA Labor Roundtable’s directory neglects to include the University of Pittsburgh’s impressive holdings or the Labadie Collection at the University of Michigan. On the other hand, while Leab and Mason’s book contains information for 36 institutions, the SAA Web site includes descriptions and URLs for 48. Twenty-five archives appear in both. Thus Leab and Mason deal with eleven missed on the SAA site and the SAA, in turn, add twenty-three. (Leab and Mason profile the Beirne Memorial Archives of the Communication Workers of America. The historical records of the union have since moved to the Wagner Labor Archives.)

Comparison or criticism seem unfair, however, as these resources utilize different media to profile different media, online versus print. Each is also at the mercy of institutions that may or may not respond to inquiries. Also, some of the archives absent from the SAA site offer researchers little on the Web. More constructively, we should note, that together, these provide a gateway to fifty-eight archival institutions. Both compilations include the major depositories that maintain a strong online presence with deep Web sites and detailed descriptions of their collections. Researchers are most likely to find online finding aids in these archives.

Methodology

Selecting Repositories for the Webliography
I began my appraisal of online resources of labor archives for this paper with Web sites included in the SAA Labor Archives Roundtable’s *Directory*, updating some URLs and making notes on general features and content. The inclusion of finding aids and their number drew special attention. I then sought out Web sites for institutions with descriptive essays in Leab and Mason’s book not included in the LAR *Directory* and examined these under the same criteria. A few other archives, revealed in links from other Web sites and not listed by either source, were added. These may have recently acquired labor collections or failed to respond to inquiries from Leab and Mason or the LAR. Although not a labor archives *per se*, I included the National Archives of the US in my listing because of its voluminous holdings for governmental agencies related to labor.

Some institutions were eliminated from the combined list for the webliography even as I compiled it. One had closed, and its collections moved to another archives. Some possessed a limited amount of labor-related material within other collections; these were dropped from consideration to concentrate on those with more extensive holdings. Efforts to access URLs for a few archives posted in the SAA *Directory* revealed no Web presence.

Many institutions remained for the webliography found in an appendix to this paper. I selected repositories that matched the following criteria. One was inclusion in Leab and Mason or the SAA *Directory*. Another was ownership of a significant collection or collections related to the labor movement or workers. Finally, the institutions included have a working Web site.

*Analyzing Repositories’ Online Resources*
I looked for a main Web page for each archives listed in the webliography and then sought Web pages providing information on labor collections for each. I checked if these Web pages listed separate labor collections and if a short description of individual collections was available. Beyond summaries indicating the scope and content of collections, I sought links to finding aids and counted how many were online.

I looked for other online resources such as digitized images, documents, and labor-related exhibits. Another characteristic noted was designation of an archive as the depository of a particular union or unions’ historical records. Also included in the webliography entries are the major labor collection or collections contained in the archives. Finally, I added some miscellaneous notes with more information on making use of the Web sites.

**Survey of Labor Archivists**

My observations prompted more questions. For answers, I would have to direct these to the archivists themselves. I prepared an introductory note and letter, a phone script for potential subjects who failed to respond, a consent form, and my interview questions (see Appendix B) for submission to the university’s review board for research involving human subjects. The board also requires an abstract of a prospective research project and responses to a number of general questions concerning the researcher’s procedures.

After completing this process and receiving the review board’s approval, I consulted my list of labor archives and submitted a letter to thirty-four archivists via email. Criteria in selecting these thirty-four from the fifty-five in the
webliography included the following. All the large, long-standing and well-known repositories were selected. Some of these archives offer extensive description of their collections online; others do not. Other archives that contained a large number of labor collections or particularly significant ones were also selected. Some repositories with Web sites that invited a closer look by nature of their deep content or attractive appearance were included as well. Finally, some archives were contacted to achieve regional geographic balance.

Nineteen of the thirty-four archivists contacted responded affirmatively. Three others answered, but declined to participate and elaborated with reasons why I should drop them from consideration. These responses contained helpful information and some revealing observations. Follow up phone calls to five archivists who failed to respond yielded nothing. Fifteen of the nineteen archivists who agreed to participate were interviewed by phone. Fortunately, the fifteen included a cross-section of labor archivists with large and small repositories, specialized and broad collections, and those affiliated with academic institutions, historical societies, and unions represented.

My interview questions are included below in a “Findings” section (and Appendix B), but can be paraphrased here as follows. Particularly where it was not obvious from an institution’s holdings, and especially where business collections (the institutional records of companies and corporations) were acquired along with union ones, I wanted to know if a collection policy existed, and if so, how effective it was. More specifically, I sought to compare and contrast the acquisition of business and union records, considering how
acrimony, and often violence, characterized the historical relationship between capital and labor.

For those archives designated as union repositories, I asked if a continuing, active relationship existed, or if this consisted of only a one-time transfer of records. I also inquired if specific union mergers had a negative or positive impact on the mission of the archives associated with those unions. The observations of both business and labor archivists thus far indicate a devastating effect on the records of the smaller participant in the new organization created (SAA, Business Archives Section, 2002; Quigle, 2002).

In a more positive vein, I asked when the institution established its presence online and how often changes or additions had been made to its Web pages. I also wanted to know whose skills made the archives’ online resources possible and if the solution was found within the archives, how these skills were obtained. Where outside help was necessary, I asked if assistance came from IT personnel in the parent institution or outside contractors.

Tibbo’s recent article made me curious about the value of online resources in attracting interest to an archive’s holdings. While evidence of increased usage might be impressionistic or related to other factors, some sense of movement could be discernable. Related to this question are the demands of researchers. Do these reflect the higher expectations suggested by Craig or the relative disinterest in the Web revealed by Tibbo?

Few observers would doubt continued growth and use of the Web. I wanted to know what projects archivists had underway or had planned for the
future to meet and exploit these demands. Limited resources dictate priorities, however. Do archivists plan to emphasize more online finding aids and information about their collections or the digitization of documents and visual material?

Encoded Archival Description, like digitization, remains a lively topic of discussion in the profession. I asked those archivists who had implemented it in their online finding aids how they acquired the skills to do so. For those who had not yet used EAD, I asked if they planned to do so in the future.

In consolidating responses to these questions, I remained aware of the relatively small sample used. An unusual or unique answer to a question is interesting and worth noting, but may reflect isolated conditions probably related to some exceptional factors. On the other hand, repeated responses had more validity given the overall small “population” of labor archivists and archives that exists.

Findings

Before examining the responses of the archivists, we should consider some statistics drawn from data in the webliography. Fifty-five archival repositories either specializing in labor collections or with significant labor collections are included. Two are in Canada, the rest in the U.S. Thirty-four (62%) are affiliated with colleges or universities. Nine (16%) are housed in state libraries or historical societies; six (10%) archives included are directly administered by state and national governments. The AFL-CIO maintains one,
and another is within a public library. The remaining four are civic or religious non-profit institutions.

Questions posed in the profile for each institution listed reveal the following. Fifteen (27%) of the fifty-five have a working depository relationship with a national union or had such a link in the past (An undetermined number have received district, local, and personal union papers). Thirty-four (62%) of the repositories have Web sites that link to a distinct page for an overview of labor collections, while thirty-nine (71%) list their labor collections either on a Web page or through an easy search function. Thirty-four (62%) include collection descriptions with general scope and content noted. Twenty-eight (51%) Web sites link to at least a few online finding aids. Of these twenty-eight, ten (18%) have most of their (or their most significant) labor collections’ finding aids online. Another six (10%) of the twenty-eight have nearly all of their collections described online in finding aids. Thirty-five (63%) sites offer other labor-related resources links. These include digitized photographs, documents, and exhibits on a theme, event, or individual. Some good examples are the Triangle Shirtwaist Fire site from Cornell, Eugene Debs material on the Indiana State site, and local labor history documents linked to the University of Pittsburgh’s pages. Others are noted in the webliography entries.

Users will generally find the largest, best-known depositories’ Web sites both deep in description and rich in detail; exceptions, however, are characteristic. Some of the nation’s oldest, long-endowed institutions offer researchers relatively little online, while other smaller, newer collections feature
sophisticated Web design and excellent finding aids. Although younger users, jaded by the advances of the past decade, will click on the sites with high expectations, those whose academic lives predate the Web will probably be pleasantly surprised and impressed by what they find.

As Prom’s current work suggests, however, users with more computer skills are at an advantage in navigating the sites for information (Prom, 2004). This is partly due to the extraordinary variety in the structure of Web sites; the savvy PC user has more familiarity with the changing array of features presented. One example is the use of sidebar guides or tables of contents. I find these convenient and effective. According to Prom’s research discussed above, I appear to be in the minority; most users do not favor the sidebar. On the other hand, his subjects who were familiar with archival arrangement or the subject content of the collection might have shared my preference. Many of the sites included in the webliography here required a bit of trial and error clicking to find the desired links, but all were navigable.

In many cases, confusion results from the terminology employed, not Web site structure or features. An “Archives” link may direct the user to the parent institution’s own records, whereas clicking on “Special Collections” produces archival holdings. A “Manuscripts” link is usually the surest path for the researcher, but finding it may require some patience and a process of elimination.

Aesthetics, like tools and structure, are influenced by personal preferences. It is clear, however, that the labor archival sites, like the Web in
general, have improved in appearance over the past decade. Some included here retain the crude or simplistic look of earlier years on the Web, but are still useable. One of the nation’s largest repositories, containing the records of many national unions, features few graphics, plain backgrounds, and unstylish fonts on its Web pages. On the other hand, nearly all of its extensive collections are described in detail in long finding aids, with all of this online.

My online research in creating the webliography spurred other questions. These questions required feedback from labor archivists, particularly concerning the creation and use of online resources. Practicing professionals could also help describe the current state of labor archives and their future direction. The questions addressed to the archivists are in boldface below, with a summary of responses following each question.

**Do you have an explicit collection development policy statement for your repository? If so, what does it include and focus on? How effectively do you think your institution meets the goals set forth in this policy? What particular factors assist you or constrain you from doing so?**

All fifteen labor archivists responding to these survey questions indicated they had no written or stated collection development policy aside from those established by their parent institutions. Informally, they pointed to a responsibility for local, state, and regional materials. Also, when additions to collections already held are offered, these are accepted. In some cases, archives have agreements with unions to do so. Several archives indicated a mix, perhaps of a large national union’s records and local or state materials, had evolved.

Concerning current acquisitions, a respondent in a prestigious Midwestern archive stated flatly that new collections are not “tracked down.” According to a
representative from a newer Northeastern archive, usage trends had placed a
higher priority on the acquisition and processing of corporate business records in
her state. She asked, "Where are the (labor) researchers?" Another archivist,
who had served in collection development of a great labor repository, blurted out
that his former department was a "shambles" with no staff and little funding.
Acquisitions were now limited to insistent existing donors. Collection
development, at its peak in the 1960s and 1970s, was now in "stasis." For these
archivist respondents, goals in collection development, albeit unstated ones, are
not being met.

**What sources [I.E., institutions, organizations, individuals] do you solicit
materials from? Are there other sources you’d like to solicit, but are
unable to do so? Please explain.**

Some archives, primarily smaller ones without processing backlogs, are
still eager to accept new materials. This particularly applies to those adding to
existing collections or of local and regional interest. As noted in responses to a
following question, individuals are an important source of new acquisitions.
Some donors may not necessarily have been union members or officers, but
worked directly or indirectly with the labor movement. Their collections, initially
considered relating to “women’s studies,” “civil rights,” “social work,” or
“education,” frequently have content of interest to labor researchers.

**Do you seek materials from business sources as well as labor unions and
workers’ groups? If so, how successful are you in doing so?**

Business collections also attract those who study unions; thus many labor
archives acquire materials from industries related to workers’ organizations.
Eight of the respondents seek and accept corporate records enthusiastically.
One pointed out, however, that business records often disappoint researchers looking for information on labor. Older business collections from the Nineteenth and early Twentieth Centuries are more likely to note workers and their concerns than those of more recent decades. As with union records, archives often collect records from businesses with a local or regional base. Another respondent suggested, however, that as once large corporations merge and fall into the hands of far away managers, they may be less interested in the legacy left behind.

One archive has found a giant national mineral producer very cooperative. The corporation has not only transferred a regional company’s records, it has also help fund the expansion of the collection and acted as a co-sponsor in attracting grants. Nonetheless, the archivist pointed out that this business, like others, remains “protective” with conditions and restrictions.

How would you characterize your relationship with the union you act as a depository for? Do you feel they have an active interest in the relationship?

Some archival relationships with unions are equally restrictive. The Teamsters’ are a good example, although it was pointed out that they have somewhat eased control over their records. While many transfers of union collections are a one-time episode, especially of now defunct organizations, four of five depository archivists surveyed claimed their long-term relationships with unions were cooperative.

Several archivists explained how personal relationships with unionists led to the acquisition of significant material from locals and district headquarters.
This was characteristic of many newer labor archives without a formal depository agreement with national unions. In many cases, respondents noted that their archives sprung from the efforts of labor and industrial relations and labor education schools in their parent institutions. Some of the academics there, once unionists themselves, maintained contacts in the labor movement. Though these individuals moved on, existing collections attracted new acquisitions and a reputation as a labor repository was created.

The closing or merging of locals and districts, potentially a threat to preservation, has also proved to be a windfall for the acquisition of old records. One archivist recounted how union officials at the local and district level literally rescued labor’s past from attics and basements. As Thomas Dublin pointed out, America’s labor heritage is rich if often neglected.

**When did you go online with information about your collection? How often do you make changes or additions to your online resources?**

Most archivists surveyed said their institutions had a very basic page online in the mid-1990s as the Web took off. Lists of collections with some description came with the turn of the century. Some archives also had printed manuscript guides and preliminary inventories online by then. Finding aids, particularly encoded ones, are quite recent. The Online Archive of California, a collaborative initiative, has helped that state’s repositories lead in placing finding aids on the Web.

A majority of respondents claimed to update their Web sites frequently or at least as often as changes at their archives dictated it. Dated Web pages indicated many had been altered in 2002 and 2003. All archivists surveyed
suggested they realized the significance of currency in the virtual world of the
Internet.

Where did you seek expertise in going online? Within the archives? Your
parent institution? An outside contractor? Professional organizations?
How much was self-taught?

When questioned as to how their archives found the human resources and
skills needed to enter the digital world, a wide variety of responses followed.
Some included the role of a committed staff member willing to take responsibility.
In other cases, it was the archivist themselves, usually with self-taught skills. A
few indicated that increasingly, technical skills are a factor in hiring staff.

Extremes in responses on this issue included the use of student assistants
with general computer skills “cutting and pasting” to create finding aids. At the
other end of the spectrum were archivists aided by technology specialists from
the parent institution, either on-call or part-time. When questioned on workshops
for Web skills, most respondents said they had not attended these. A few said
they had done so, in most cases once. Member institutions of the Online Archive
of California are an exception here. The OAC, while not prescribing a strictly
standard format for all submissions, has fostered a good deal of uniformity in its
finding aids through its use of EAD. Archivists or responsible staff members in
this state may also attend more central workshops than their colleagues
elsewhere.

Have online resources proved of value in attracting interest in your
collection? How do you know? What evidence do you have?

Their efforts, however informed, to get online have been rewarded. Every
archivist surveyed indicated inquiries to their institutions have increased since
they mounted a Web site. Although none offered quantitative proof, the anecdotal evidence is impressive. One claimed they were “googled immediately” upon their entry to the Internet. While another archivist assumed putting information on the Web would reduce inquiries by eliminating easily answered questions, the opposite proved true.

Many archivists point to email inquiries, another digital medium, as one indication. These have increased in volume and often cite the archive’s Web site. In some cases, inquiries by email or phone include specific questions that could only have been suggested by content on the Web site. Some users offer gratitude for the Web site, though one archivist noted that some information linked to their page is so detailed, researchers need not visit the physical archives. Another archivist opined optimistically that their labor collections appeared to be attracting more interest over the past year, at least as part of “social history” in women’s, African-American, and local studies. It seems altogether likely the exposure of online resources created some of this renewed attention.

Are historians beginning to expect or demand online access to your collection? If you have no finding aids online, are they asking for these? If you have finding aids online, are they using these? How do you know? Are they asking for more?

As Craig predicted, some of today’s researchers can be demanding. One respondent described their expectations as “irrational” and “unrealistic.” Several archivists noted a common assumption that archival holdings, the actual documents, are “all online.” Tibbo’s findings, however, that many professional
Anecdotal evidence suggests a variety of user reactions to online description of archival materials. Law firms, film and video makers, and genealogists often expect archives to find and deliver copies of specific documents or photographs. Some of these patrons realize this service is costly in time and resources; others do not. One respondent noted that legal researchers, accustomed to simply adding these costs in billing clients, are willing to pay for large numbers of copies. Other patrons, including some academic ones, annoyed another archivist with expectations his staff would conduct “research by proxy.”

Online finding aids appear then to have influenced user behavior in a variety of ways. Some patrons skillfully comb them for a folder containing documents relevant to their research. If they are successful, the archives might expect a visit or request for specific copies from these users. Others, however, may or may not know what documents they need, and use the online finding aid to compile a “shopping list.” Too many researchers do not follow this up with a visit. The archivist, with limited time and staff, must explain they simply cannot conduct such research for them. A respondent also noted the disappointment expressed by some researchers that not only are documents related to specific individuals not online, but also that these are often restricted or nonexistent.

What online projects are now “in the works”? What other online resources do you plan to add in the future? Where would you concentrate limited resources for your online presence? Images? Finding aids? Digitized full text?
Despite such irritations, finding aids are the priority online project for labor archives. One prominent Eastern repository will mount an extensive preliminary inventory for a recently acquired major collection this summer. Another institution will soon post a cross-collection guide for its holdings on the formative years of a great industrial union. An archivist who rushed a detailed guide to a large collection of personal papers online as Word documents is now encoding this into EAD.

Only one respondent mentioned digitizing newspapers and this was not a labor-related project. Another is scanning the cover pages in its impressive collection of labor and radical publications. More archivists, however, were interested in getting photographs online, often in cooperation with their parent institution’s digital library. One who already has many labor photos in her state’s online exhibit plans to add documents, broadsides, and audio of oral history interviews.

A leading repository’s archivist hopes to see maps and film from his collections online in the not too distant future. Such media are especially useful in attracting a more general use of online resources, particularly in the “K – 12” school grades so significant to grant reviewers. Respondents agreed that costly digitization should usually be reserved for “visuals” aimed at a “mass audience,” not individual documents. The latter, pulled out of context, may only interest a limited number of academic researchers. One archivist pointed out, however, that images require interpretation and that the preparation of descriptive text
takes time and expertise. Such costs can be considerable and are less evident in digitization projects.

Two archivists surveyed were even less ebullient concerning digitization and online resources in general. One insisted he needed additional full-time staff for processing and describing existing collections; without funding for such basic archival functions, online resources for him remain “extras.” Both archivists complained grant funding is more plentiful for digitization projects “at the front end;” they need money for the “beginning of the process.” To quote the second respondent,

We are seeking grants to process some of our larger labor collections, but I find that most of the funds are earmarked for digitization. May I ask how I can digitize, or even microfilm, if 300 to 800 linear foot collections are not organized?

(For institutions utilizing Encoded Archival Description) How did you learn it? (For those not using EAD) Do you have plans to use EAD for your finding aids? What may be needed for you to take this step?

A more optimistic self-described “techy” archivist is using a simple method to speed the encoding of finding aids. She and a co-worker are using Microsoft Access to create a database with properties corresponding to EAD fields. Student assistants with the most basic computer skills can export the data and create a finished product. Another respondent said she is “blessed” with a staff member self-taught in NoteTab encoding software and basic HTML who “believes in it (EAD) for the future.” Several archivists surveyed indicated satisfaction with NoteTab, although one is using XMetaL. This archivist is mainly
acting as a troubleshooter for the student assistants who cut and paste data into the template.

EAD appears to have caught the attention of most labor archivists in the past few years. Several noted one obstacle; a bottleneck in “redoing” many finding aids to fit the encoding format. Unfortunately, this seems especially true for large collections. These are sometimes arranged in a scheme unique to each, and often, because of their size, include somewhat vague description.

Other reactions to EAD vary widely. Most archivists surveyed have either encoded at least a few finding aids or plan to do so in the near future. A positive sense of inevitability seems to pervade, yet also that some time remains until XML becomes predominant. One respondent has attended EAD workshops, but has no finding aids encoded and protests he needs funds from his parent institution for software and personnel. At the other end of this spectrum is a Midwestern archivist whose EAD work is handled by a vendor through a university consortium, the Research Libraries Group.

As noted, institutions in California, while responsible for encoding their own finding aids, have a degree of uniformity imposed on them by participation in the Online Archive of California. The use of EAD fields and format elsewhere will naturally create similar finding aids. No such uniformity exists or seems likely to emerge in archival Web sites generally.
Summary

Personal tastes and preferences will probably continue to override conclusions on site structure and use which studies like Prom’s suggest (Prom, 2004). The sites in the appended webliography that follows reflect this diversity. That may not be an altogether bad thing; indeed, variety is the spice that attracts people to the Web and keeps bringing them back. After all, what good is utility with no users?

More definitively, we know virtually all labor repositories have at least a Web site with contact information. Almost two-thirds of them list their labor collections and offer some description, scope, and content of these holdings. Two-thirds of the Web sites also include other resources online, such as exhibits, research guides, and links to other labor-related Web sites. A slim majority has finding aids online. Less than one-fifth of the archives have most or their most significant collections described with online finding aids. One-tenth of the repositories have online finding aids for all but their most recently acquired collections.

Most evidence points to the fact that online resources, even a simple Web page with limited description, has spurred greater interest in and use of labor archival collections. Beyond those strictly interested in workers and unions, labor collections will remain a significant resource to researchers in business history and genealogy, along with women’s and ethnic studies. There is no doubt that the expectations of users will remain high (some archivists might say unreasonable), but it can be hoped that contact with archives, and a touch of
archival education, will inject a dose of reality as to what can be expected to be available on the Web.

Many Web sites and archivists offer an expressed desire to add descriptive content for their collections. EAD will continue to spread, and may indeed create more uniformity for online finding aids, but many archives will not put more than a few on the Web in the near future. Funding is partly responsible, either the lack of it or the directing of grants to other priorities, especially educational tools emphasizing digitized documents and images. Representation of collections, rather than description, remains the contemporary trend.

Technology training for archivists is now emphasized in graduate programs, although as evidenced in the field, skills remain uneven, self-taught, or borrowed from IT specialists and student workers. Consortia such as the OAC or NCEcho are helping to spread instruction and fill the technology gap. Most sites viewed and most archivists surveyed display an enthusiasm for the potential of technology.

Seemingly less hopeful for labor archivists are union mergers, with the disappearance of some unions, and the current decline of the labor movement in general. Although union contraction threatens the survival of records, it has also been a boon for archives when offices and individuals seek to unload unwanted materials. The close relationships of the past between labor academics and unionists continue, both in the area of labor education and the preservation of labor’s historical legacy.
Nonetheless, the heady days of great acquisitions in past decades appear to be over, at least for paper records. Fewer members and a declining share of the workforce create less historical evidence and less interest in unions. The labor movement is attempting to adjust to the service economy and may recover somewhat, but seems unlikely to regain the position it held in the years following the Second World War, at least in the foreseeable future (Zieger, 1986).

This paper has not addressed the shift to electronic records. For unions and all institutions of our society, the preservation of digital documents remains a growing challenge for archivists (Conway, 1996). These records generally remain current and have not yet entered the archives. One hopes that a reinvigorated Labor Archives Project, or some other initiative from the SAA’s Labor Archives Roundtable or elsewhere takes this question up again (Connors, 2002). Otherwise, it is likely the labor history of the current century may be a blank tablet once written on degraded media with obsolete technology.

(707) 826-3441
http://library.humboldt.edu/infoservices/humco.html

Union depository?  No

Major collections:  Redwood District Council of Lumber and Sawmill Workers Collection, United Brotherhood of Carpenters and Joiners of America (Northern California districts)

Web page for labor collections?  http://library.humboldt.edu/infoservices/holdings.htm
Labor collections listed? Yes

Descriptions available? Yes

Finding aids available? http://www.oac.cdlib.org/findaid/ark:/13030/tf8p3006h6

Other resources online? Regional photography, including industries and workers

Notes: The Redwood District Council of Lumber and Sawmill Workers was a regional umbrella organization that included more than 70 local unions over several decades. The online finding aid for this collection is quite detailed and very well arranged. The use of record groups solves the problem of so many discrete collections within a collection. Great care was also taken to make the presentation easy to use and esthetically pleasing. The historical background portion of the finding aid is an extensive essay in itself and each record group includes an elaborate scope and content note. (Part of the Online Archive of California)

Labor collections listed? Click on Archival Collections on sidebar; then click on Selected Collections.

Descriptions available? Yes

Finding aids available? Yes

Other resources online? Click on Archival Collections on sidebar, then click on Photographs and/or Films for a few images and detailed descriptions of films. Also, click on Iowa Labor History Oral Project on sidebar. Over 1,100 interviews are described and indexed here.

Notes: 125 collections listed; most linked to online finding aids

Library and Archives Canada
395 Wellington Street
Ottawa, Ontario K1A 0N3
995-5138 (local)
1(866) 578-7777 (toll free Canada and U.S.A.)
http://www.collectionscanada.ca/index-e.html

Union depository? No

Major collections: National labour federations; governmental labour agencies

Web page for labor collections?
http://www.collectionscanada.ca/2/26/h26-201-e.html#NationalArchives

Labor collections listed? The ArchviaNet search engine returned 156 fonds (collections) using search term “trade unions Canada.”

Descriptions available? All fonds returned are described. Many larger collections link to descriptions of series within.

Finding aids available? Many fonds’ descriptions link to online finding aids

Other resources online? Guide to Canadian Labour History Resources
http://www.nlc-bnc.ca/2/26/index-e.html#ReferenceSources

Notes: Web pages beyond the home page differ considerably from US ones in format, but are rich in information.

Manuscript Division
Library of Congress  
101 Independence Avenue, SE  
Washington, D.C. 20540-4680  
(202) 707-5383  
http://lcweb.loc.gov/rr/mss/msshome.html

Union depository? No

Major collections: Brotherhood of Sleeping Car Porters; A. Philip Randolph; American Federation of Labor Letterbooks; Pinkerton's National Detective Agency; National Child Labor Committee; National Consumers League; National Women's Trade Union League of America; United States Work Projects Administration Federal Writers' Project and Historical Records Survey. Also, personal papers of many individuals in government relevant to the history of the labor movement.

Descriptions available? http://www.loc.gov/rr/mss/laborlc.html

Other resources online? Lewis Hine and Farm Security Administration photographs; miners’ songs; other non-print materials can be found at http://www.loc.gov/rr/business/coll/beschome.html

Notes: Excellent online EAD finding aids described to folder level and fully searchable.

________________________________________________________________

George Meany Memorial Archives  
10000 New Hampshire Avenue  
Silver Spring, Maryland 20903  
(301) 431-5451  
http://www.georgemeany.org/archives/home.html

Union depository? Yes

Major collections: AFL-CIO central administrative and staff departments

Web page for labor collections?  
http://www.georgemeany.org/archives/using.html
Labor collections listed?  
http://www.georgemeany.org/archives/annotated.html links to annotated guide to record groups in the collection

Descriptions available?  Use record group links on annotated guide page

Finding aids available?  Yes, record groups of the President, International Affairs, and Information Departments contain several series described to the folder level.  Other record groups are described at the series level.

Other resources online?  Link to Labor’s Heritage magazine  
http://www.georgemeany.org/archives/lh.html Also links to permanent exhibit on Meany, A. Philip Randolph, and temporary exhibits; education sites, including archival procedures for union offices

Notes:  Most records date to merger of 1955, but some (most notably AFL presidents Gompers and Green) go back to 1881.  Finding aids are available for most requested record groups.

Minnesota Historical Society  
Division of Library and Archives  
345 W. Kellogg Blvd.  
St. Paul, MN 55102-1906  
(651) 296-6980  
http://www.mnhs.org/index.html

Union depository?  No

Major collections:  AFL-CIO regional records; many locals and districts of Minnesota unions

Web page for labor collections?  
http://www.mnhs.org/library/collections/manuscripts/labor.html

Labor collections listed?  Yes

Descriptions available?  Labor collections Web page has links to description page for each collection.

Finding aids available?  Nine collections of “labor organizations” have finding aids linked to collection description pages.

Other resources online?  Search of “Visual Resources Database”  
http://collections.mnhs.org/visualresources/search.cfm?bhcp=1 using “labor” returned 926 items, many with images.
Notes: MHS 37 collections of labor organizations, 26 of labor leaders, and in a fresh approach, ten of individual workers and eight for selected businesses of particular interest to labor researchers. Another innovation deserves notice. Collection descriptions linked to the list of collections include subject headings which link in turn to all material in the MHS, much like a library OPAC. Also, location in the archives' holdings is found in a link to a “manuscript notebook.”

Montana Historical Society
225 North Roberts
Helena, Montana 59620-1201
(406) 444-2694

612 East Boulevard Avenue
Bismarck, ND 58505-0830
(701) 328-2091
http://www.state.nd.us/hist/sal/manu.htm

Union depository? No

Major collections: North Dakota AFL-CIO; Teamsters', Carpenters' locals

Web page for labor collections? No

Labor collections listed? Guide to Manuscripts
http://www.state.nd.us/hist/sal/manu/mgpreface.htm lists and describes
collections alphabetically. “Index” link lists 13 collections under “labor and
laboring classes.”

Descriptions available? Yes

Finding aids available? No

Other resources online? No

Notes: “Preface” to Guide advises against use of OPAC for manuscripts as
many remain uncataloged.

The Ohio Historical Society
1982 Velma Avenue, Columbus, OH 43211
(614) 297-2300
http://www.ohiohistory.org/resource/archlib/

Union depository? No

Major collections: William Green; Ohio AFL-CIO; Columbus area unions

Web page for labor collections? No
Labor collections listed? No

Descriptions available? Yes, the OHS Archives/Library’s “Online Collection Catalog” links to descriptions. Unfortunately, searches cannot be limited to manuscript materials.

Finding aids available? No

Other resources online? No

Notes: The Youngstown Historical Center of Industry and Labor Archives/Library, a part of the Ohio Historical Society, is dealt with separately below.

Ozarks Labor Union Archives
Southwest Missouri State University
901 South National Springfield, Missouri 65804-0095
417-836-5428

http://library.smsu.edu/Meyer/SpecColl/oluahome.htm

Union depository? No

Major collections: Missouri AFL-CIO; several large local unions in Southwest Missouri

Web page for labor collections?
http://library.smsu.edu/Meyer/SpecColl/oluacollections.htm

Labor collections listed? Yes

Descriptions available? Yes

Finding aids available? Sixteen of 18 processed collections have detailed, folder-level online finding aids.

Other resources online? Labor Unions in the Ozarks (book excerpts) at http://library.smsu.edu/Meyer/SpecColl/unionhistory.htm

Notes: A good and growing regional repository. Collections include “right to work” legislation battle and a local’s factory relocation ordeal.

Historical Collections and Labor Archives
Special Collections Library
104 Paterno Library
Pennsylvania State University  
University Park, PA 16802-1808  
(814) 865-7931  
http://www.lias.psu.edu/speccolls/hcla/

Union depository? Yes

Major collections: United Steel Workers; United Mine Workers

Web page for labor collections?  
http://www.lias.psu.edu/speccolls/hcla/steel.htm

Labor collections listed? Some collections are listed on the “HCLA” page noted above.

Descriptions available? USW collections are described on the “Steel” page noted above.

Finding aids available? Online finding aids for two small labor collections are available at  
http://www.lias.psu.edu/speccolls/FindingAids/laborhistory.html

Other resources online? No

Notes: A guide for the Steel Workers Organizing Committee materials in many of the USW and UMW will be available in the future.

________________________________________________________________

Wayne State University  
Walter P. Reuther Library  
5401 Cass Avenue, Detroit MI 48202  
(313) 577-4024  
http://www.reuther.wayne.edu/

Union depository? Yes

Major collections: Association of Flight Attendants; American Federation of State, County & Municipal Employees; American Federation of Teachers; Airline Pilots Association; Industrial Workers of the World; National Association of Letter Carriers; Service Employees International; The Newspaper Guild; United Automobile Workers; United Farm Workers; Heber Blankenhorn; CIO Political Action Committee

Web page for labor collections?  
http://www.reuther.wayne.edu/unions.html
Labor collections listed?  [http://www.reuther.wayne.edu/collections/unions.htm](http://www.reuther.wayne.edu/collections/unions.htm)
A list with links to individual collections in the Reuther’s UAW holdings is at [http://www.reuther.wayne.edu/collections/unions-uaw.htm](http://www.reuther.wayne.edu/collections/unions-uaw.htm)

Descriptions available?  Yes

Finding aids available?  Yes, an alphabetical index to all collections linked to HTML encoded finding aids is at [http://www.reuther.wayne.edu/collections/hefa_coll.htm](http://www.reuther.wayne.edu/collections/hefa_coll.htm)

Other resources online?  [http://www.reuther.wayne.edu/](http://www.reuther.wayne.edu/) has links to temporary topical exhibits as well as [http://www.reuther.wayne.edu/Virtual_Motor_City.html](http://www.reuther.wayne.edu/Virtual_Motor_City.html) a searchable database of 15,000 images in collaboration with the *Detroit News*. [http://www.reuther.wayne.edu/Links/archivelinks.html](http://www.reuther.wayne.edu/Links/archivelinks.html) has links to other libraries and archives with labor collections.

Notes:  The Reuther’s pages can seem byzantine, but the user can find what he or she needs, sometimes through multiple paths.  For instance, [http://www.reuther.wayne.edu/collections/supplement.htm](http://www.reuther.wayne.edu/collections/supplement.htm) is a “Supplement to the 1974 Reuther Guide Book” containing an alphabetical index with descriptive notes for all the collections processed since that date.  The Reuther uses a novel search method for the vast autoworkers’ records.  Series indexes of alphabetical topics yield box and folder numbers, in many cases, several folders in different boxes.  While less than elegant, it is effective and easy to use.  “HEFAs,” HTML encoded finding aids, enable the search function.  If there is inconsistency here, this seems inevitable given the size and variety of the collections.  In nearly all cases, however, a quick return to previous pages easily redirects the user.

[http://www.library.sfsu.edu/special/larc.html](http://www.library.sfsu.edu/special/larc.html)

Union depository?  No

Major collections:  National War Labor Board Records; California Department of Industrial Relations

Web page for labor collections?  [http://www.library.sfsu.edu/special/larc.html](http://www.library.sfsu.edu/special/larc.html)

Labor collections listed?  [http://www.library.sfsu.edu/special/2003holdings/pdf](http://www.library.sfsu.edu/special/2003holdings/pdf) is collections guide in PDF format. It will not open except from “Holdings List” link under “Collections” on home page.

Descriptions available?  Yes, in collections guide linked to home page (see above)

Finding aids available?  LARC has contributed 49 finding aids to the Online Archive of California [http://www.oac.cdlib.org/dynaweb/ead](http://www.oac.cdlib.org/dynaweb/ead). Click on “List of contributing institutions” and scroll down to LARC link.

Other resources online?  A few images are available at [http://www.library.sfsu.edu/special/photos.html](http://www.library.sfsu.edu/special/photos.html) A Web site for labor art in California failed to open.

Notes:  Fine regional collection of Bay Area labor activities in the Twentieth Century. Excellent finding aids on OAC Web site.
Southern California Library for Social Studies and Research
6120 S. Vermont Avenue
Los Angeles, California 90044
(213) 759-6063
http://www.usc.edu/isd/archives/la/libraries/la_libraries_so_cal.html for overview and background
http://www.socallib.org/ homepage with links to collections

Union depository? No

Major collections: Harry Bridges deportation case, CIO in Los Angeles and California 1940s-1950s, legal defense committees, local labor union activities such as the Hollywood Studio Strike of 1945-1947

Web page for labor collections?
http://www.socallib.org/SCLWebSite/collections_intro.html lists all the collections alphabetically, labor-related ones included.

Labor collections listed? Not separately

Descriptions available? Yes

Finding aids available? Most of approximately twenty labor-related collections are encoded and online (Online Archive of California).

Other resources online? No

Notes: Interesting regional collections with quality OAC EAD finding aids.

Southern Labor Archives
Georgia State University Library
Georgia State University
100 Decatur Street SE
MSC 8E0705
Atlanta, GA 30303-3202
(404) 651-2477
http://www.library.gsu.edu/spcoll/Labor/

Union depository? Yes (SLA holds national records for unions listed here in "Major Collections")

Major collections: International Association of Machinists and Aerospace Workers; United Garment Workers of America; United Furniture Workers of
America; Professional Air Traffic Controllers Organization; regional AFL-CIO; many local and district records for unions throughout the Southeastern US

**Web page for labor collections?**  
http://www.library.gsu.edu/spcoll/Collections/Labor/index.htm

**Labor collections listed?**  Almost 200 of the SLA's 500+ collections are listed.

**Descriptions available?**  Web page for labor collections links to descriptions and finding aids for almost 200 collections.

**Finding aids available?**  Yes, almost 200 (including most major collections) finding aids are online.

**Other resources online?**  130 prints related to labor from the 19th & Early 20th Centuries; “Voices of Labor” oral history project summaries of interviews; “Work ‘n’ Progress” Georgia labor history school curriculum guide

**Notes:**  SLA’s claim as the preeminent labor repository in the South is indisputable. The archive is also a leader in technology; many of its online finding aids are EAD encoded.

Web page for labor collections? No

Labor collections listed? Yes

Descriptions available? No

Finding aids available? No

Other resources online? No

Notes: Dublin’s article on labor material on the Web indicates this is a new partnership of labor, business, and academic resources.

M.E. Grenander Department of Special Collections and Archives
University at Albany, SUNY
New Library Room 352
Albany, NY 12222
(518) 437-3931
http://library.albany.edu/speccoll/

Union depository? No

Major collections: Albany, Schenectady, and Troy union locals and districts; area residents involved in the labor movement

Web page for labor collections? http://library.albany.edu/speccoll/labor.htm

Labor collections listed? Yes, see http://library.albany.edu/speccoll/documentinglabor/apap_listing1.htm for list without descriptions or links to finding aids.

Descriptions available? Yes
Finding aids available?  Forty-one of 44 labor collections have fully descriptive finding aids online linked to the labor collections page.

Other resources online?  “Documenting Labor Inside and Out” uses the archives’ collections to illustrate the significance and uses of labor documents.  http://library.albany.edu/speccoll/documentinglabor/index.html

Notes:  SUNY Albany’s substantial labor collections are not self-evident; these are included within “Archives of Public Affairs and Policy” at the Grenander.

University of British Columbia Library
Special Collections and University Archives Division
Main Library
1956 Main Mall
Vancouver, B.C.
V6T 1Z1
(604) 822-2521
http://www.library.ubc.ca/spcoll/

Union depository?  No

Major collections:  United Fishermen & Allied Workers; Int’l Union of Mine, Mill & Smelter Workers

Contains links to descriptions of two major labor collections noted above.

Labor collections listed?  No

Descriptions available?  Sidebar search on “Manuscript Collections” page noted above returns 27 relevant labor collections.

Finding aids available?  “EAD Pilot Project” linked to “Manuscripts Collections” page does not include any labor collections.

Other resources online?  http://www.library.ubc.ca/spcoll/collage.gif Collage of items from labor and business collections.

Notes:  UBC’s “EAD Pilot Project” is progressing in phases.

Archives
184 UCB, University of Colorado
Union depository? Yes

Major collections: Western Federation of Miners; Mine, Mill, and Smelter Workers; National Farmers Union; Oil, Chemical & Atomic Workers; International Typographical Union

Web page for labor collections? http://www-libraries.colorado.edu/ps/arv/collections/labor.htm

Labor collections listed? http://www-libraries.colorado.edu/ps/arv/collections/lists/labor.htm

Collections guide also available in Word document and PDF formats linked to http://www-libraries.colorado.edu/ps/arv/frontpage.htm

Finding aids available? No

Other resources online? No

Notes: A major repository. Once part of the “Western Historical Collections,” these have now been placed under the university’s archives department. Searches under the WHC will yield old references. Larger collections (300 to 800 boxes), such as Western Federation of Miners remain unprocessed. Other significant collections include Colorado districts and locals of the United Brotherhood of Carpenters and Joiners and a Long Beach CA Oil, Chemical & Atomic Workers local.

Business, Railroad, Labor and Ethnic Heritage and Immigration Collections
Thomas J. Dodd Research Center
University of Connecticut
405 Babbidge Road Unit 1205
Storrs, CT 06269-1205
(860) 486-2516
http://www.lib.uconn.edu/DoddCenter/ASC/

Union depository? No

Major collections: Regional, state, and local AFL-CIO; International Association of Machinists and Aerospace Workers locals and district
Web page for labor collections? Yes

Labor collections listed?
http://webapps.lib.uconn.edu/Dodd/AToZ.cfm?StartLetter=All&Area=9&Display=Long

Descriptions available? Pages at URL for labor collections list contain descriptions.

Finding aids available? Yes, labor collections list entries contain finding aid format and links to online finding aids. Ten of 30 labor collections have online finding aids detailed to folder level. Most are not yet encoded in EAD

Other resources online? http://www.cthistoryonline.org/sitemap.html contains exhibits on the state’s textile industry and women workers. “Links to Labor History Resources in the United States” page includes selected Web sites for archives elsewhere.

Notes: Good finding aids. Upon completion of encoding, these will offer access to a strong state labor collection. IAM collections do not have online finding aids.

University Archives and Special Collections
University of Hawaii at Manoa
2550 McCarthy Mall
Honolulu, HI 96822
(808) 956-6995, or via Special Collections, 956-8264

**University of Michigan**
Ann Arbor, Michigan 48109-1205
(734) 764-9377
http://www.lib.umich.edu/spec-coll/labadie/

Union depository? No

**Major collections:** The Labadie Collection (See **Notes** below)

**Web page for labor collections?** http://www.lib.umich.edu/spec-coll/labadie/brochurecover.html is the home page for manuscripts in the collection.

**Labor collections listed?** http://www.lib.umich.edu/spec-coll/labadie/labadiemanuscripts.html#guide is the alphabetical guide to collections contained in the Labadie.

**Descriptions available?** Yes, the alphabetical guide contains descriptions for each collection contained in the Labadie.

**Finding aids available?** No

**Notes:** “Although the Collection was originally concerned mainly with anarchist materials (the field in which it remains strongest), its scope was later widened considerably to include a great variety of social protest literature together with political views from both the extreme left and the extreme right…. In addition to anarchism, the Collection's strengths include: civil liberties (with an emphases on racial minorities), socialism, communism, colonialism and imperialism, American labor history through the 1930s, the IWW, the Spanish Civil War, sexual freedom, women's liberation, gay liberation, the underground press, and student protest.” [from the “Introduction” Web page]

Union depository? Yes

Major collections: International Woodworkers of America; Oregon AFL-CIO

Web page for labor collections?
http://libweb.uoregon.edu/speccoll/exhibits/labor/search_page/collections.php

Labor collections listed? Yes

Descriptions available? Yes

Finding aids available? No

Other resources online?
http://libweb.uoregon.edu/speccoll/exhibits/labor/about.html About the Project
http://libweb.uoregon.edu/speccoll/exhibits/labor/goals.html Goals (scope, etc.)
http://libweb.uoregon.edu/speccoll/exhibits/labor/resources.html (Links to other labor sites)

Notes: Dozens of collections include personal papers and business or government records related to labor along with the large Woodworkers collection. Collections Web page includes a useful search by subject function. Some pages include images linked to related collections.

United Electrical Workers/Labor Collections
Archives Service Center
University of Pittsburgh
7500 Thomas Boulevard, 2nd Floor
Pittsburgh, PA 15260
(412) 244-7091
http://www.library.pitt.edu/libraries/archives/ue_labor.html

Union depository? Yes

Major collections: United Electrical Workers; regional collections

Web page for labor collections?
http://www.library.pitt.edu/libraries/archives/ue_labor.html

Labor collections listed? Yes

Descriptions available? No

Finding aids available? No
Other resources online? *Pittsburgh & Western Pennsylvania Labor Legacy*
http://www.library.pitt.edu/labor_legacy/

*Archives of Industrial Society* (Separate and extensive group of ethnic, church, and business collections also housed in the University of Pittsburgh’s Archives Service Center)
http://www.library.pitt.edu/libraries/archives/aistoc.html

*Historic Pittsburgh* (Historical Society of Western Pennsylvania’s site hosted by the University) links to corporate photo collections as well as EAD finding aids for collections for HJ Heinz Co., Carnegie Steel, Alcoa, and Charles Owen Rice.
http://digital.library.pitt.edu/pittsburgh/ This ongoing project will encode other labor related collections, including those at the University of Pittsburgh, in the future.

Notes: Pittsburgh’s online resources emphasize the area’s rich labor heritage, not description of the UE collection. The *Labor Legacy* page links to a data bank of local union records, digitized documents highlighting critical events, chronologies, online exhibits, and profiles of individual unions. An excellent site map [http://www.library.pitt.edu/labor_legacy/sitemap.html](http://www.library.pitt.edu/labor_legacy/sitemap.html) provides an outline and links.

University of Washington Libraries
Manuscripts, Special Collections, University Archives
Allen Library South, Basement
Box 352900
University of Washington
Seattle, WA 98195-2900
(206) 543-1929, 543-1879
http://www.lib.washington.edu/specialcoll/

Union depository? No
Major collections: Six regional collections

Web page for labor collections? No

Descriptions available? Yes

Other resources online? No

Notes: Broussais collection contains anti-union espionage reports for 1919 Seattle General Strike. Maloney papers document broad experience of a labor radical. Finding aid notes for all collections are extensive.

Robert F. Wagner Labor Archives & Tamiment Labor Collections
70 Washington Square South
New York, NY 10012
(212) 998-2630
[http://www.nyu.edu/library/bobst/research/tam/](http://www.nyu.edu/library/bobst/research/tam/)

Union depository? Yes

Major collections: Communications Workers of America; United Telegraph Workers; Actors’ Equity Association; Associated Actors and Artists of America

Web page for labor collections? [http://www.nyu.edu/library/bobst/research/tam/labor.html](http://www.nyu.edu/library/bobst/research/tam/labor.html) (“Find on this Page” search box available)

Labor collections listed? Yes

Descriptions available? No
Finding aids available? Online finding aids include the CWA and UTW collections. [http://www.nyu.edu/library/bobst/research/tam/fa_index.html](http://www.nyu.edu/library/bobst/research/tam/fa_index.html)

Other resources online? Specialized Guides (Yiddish-speaking; women; reference) [http://www.nyu.edu/library/bobst/research/tam/guides.html](http://www.nyu.edu/library/bobst/research/tam/guides.html)
Notes: The Wagner’s extensive holdings focus on the New York metropolitan area although the CWA and UTW are national unions. All finding aids are encoded in EAD. The Tamiment Labor Collections are a comprehensive group of personal papers and organizational collections in published microform.

West Virginia and Regional History Collection
West Virginia University
Wise Library
P.O. Box 6069
Morgantown, WV 26506-6069
(304) 293-3536
http://www.libraries.wvu.edu/wvcollection/index.htm is the home page; click on “Guide to Archives and Manuscripts”

Union depository? No

Major collections: Districts and locals of the United Mine Workers; individuals, coal operators, and organizations related to the UMW

Web page for labor collections? No

Labor collections listed? No

Descriptions available? Guide to Archives and Manuscripts
http://www.libraries.wvu.edu/wvcollection/manuscripts/guide.htm lists and describes all collections alphabetically by title. The Guide’s “Index”
http://www.libraries.wvu.edu/wvcollection/manuscripts/guideindex.htm lists labor collections by subject. The Guide is searchable through a browser. A PDF version of the Guide is also available.

Finding aids available? No

Other resources online? http://www.libraries.wvu.edu/wvcollection/index.htm (home page) contains link to photographic collections for “Coal Mines & Mining” and “WV—State Federation of Labor.”

Notes: Use the Guide's “Index” with caution. “Labor” entries do not include WVU's vast number of collections related to coal mining and the UMW.

Wisconsin Historical Society Archives
816 State Street
Madison, WI 53706
(608) 264-6460
http://www.wisconsinhistory.org/archives/
Union depository? Yes

Major collections: American Federation of Labor (1888-1955); Wisconsin AFL-CIO; Amalgamated Association of Street, Electric Railway, and Motor Coach Employees; United Packinghouse Workers (includes Amalgamated Meat Cutters and Butcher Workmen); International Brotherhood of Teamsters; Retail Clerks International Union; Textile Workers Union; United Food and Commercial Workers; John L. Lewis; Morris Hillquit; John R. Commons; Socialist Labor Party; Socialist Workers Party.

Labor collections listed? No

Descriptions available? The WHS ArCat http://arcat.library.wisc.edu/ OPAC works well and offers complete catalog entries with descriptive notes.

Finding aids available? http://libtext.library.wisc.edu/shswead/ returned fourteen labor collections encoded in EAD. These included the Highlander Research and Education Center; the American Communications Association; the Bricklayers, Masons, and Plasterers International Union; the Associated Unions of America.

Other resources online? Wisconsin Historical Images http://www.wisconsinhistory.org/whi/ returned 26 images using search term “labor union.”

Notes: Prestigious and the oldest American labor repository. “In the Library the holdings of labor newspapers, periodicals, and pamphlets is (sic) unparalleled.” (From the Labor Collections page)

YIVO Institute for Jewish Research
Archives/Library
15 West 16th Street
New York, NY 10011-6301
(212) 292-1892
http://www.yivoinstitute.org/archlib/archlib_fr.htm

Union depository? No

Major collections: Jewish Labor Bund
Web page for labor collections?  Click on “Archives” in sidebar; then click on “Bund Archives.”

Labor collections listed?  No

Descriptions available?  No

Finding aids available?  No

Other resources online?  “Story of the Jewish Labor Bund” exhibit
http://www.yivoinstitute.org/exhibits/bund_fr.htm

Notes:  “The Bund Archives contain not only the official records of the Jewish Labor Bund (as the Bund is officially known in English), but also important documents on the history of the revolutionary movement in tsarist Russia; the socialist, anarchist, territorialist, and labor movements in both Europe and the United States; Yiddish culture; and the Holocaust.” (From the “Archives” page)

Youngstown Historical Center of Industry and Labor Archives/Library
P.O. Box 533
Youngstown, OH 44501
1(800) 262-6137 (toll free)
(330) 743-5934
http://www.ohiohistory.org/youngst/arch_lib.html

Union depository?  No

Major collections:  Mahoning valley industries, unions, labor activism

Web page for labor collections?  No

Labor collections listed?  “Holdings of the Youngstown Historical Center of Industry and Labor are listed in The Ohio Historical Society Online Collection Catalog.” http://www.ohiohistory.org/ipac-cgi/ipac

Descriptions available?  No

Notes: Some archival materials are held in the OHS in Columbus, not in the YHCIL. (42 items returned for “United Steel Workers”, for example, are in Columbus. Online finding aid for the Ecumenical Coalition of the Mahoning Valley, on the other hand, states it is in the YHCIL. Other finding aids do not indicate the location of collections.
APPENDIX B: SURVEY QUESTIONS DIRECTED TO LABOR ARCHIVISTS

1.) Do you have an explicit collection development policy statement for your repository? If so, what does it include and focus on? How effectively do you think your institution meets the goals set forth in this policy? What particular factors assist you or constrain you from doing so?

2.) What sources [I.E., institutions, organizations, individuals] do you solicit materials from? Are there other sources you’d like to solicit, but are unable to do so? Please explain.

3.) Do you seek materials from business sources as well as labor unions and workers’ groups? If so, how successful are you in doing so?

4.) How would you characterize your relationship with the union you act as a depository for? Do you feel they have an active interest in the relationship?

5.) When did you go online with information about your collection? How often do you make changes or additions to your online resources?

6.) Where did you seek expertise in going online? Within the archives? Your parent institution? An outside contractor? Professional organizations? How much was self-taught?

7.) Have online resources proved of value in attracting interest in your collection? How do you know? What evidence do you have?

8.) Are historians beginning to expect or demand online access to your collection? If you have no finding aids online, are they asking for these? If you have finding aids online, are they using these? How do you know? Are they asking for more?

9.) What online projects are now “in the works”? What other online resources do you plan to add in the future? Where would you concentrate limited resources for your online presence? On images? Finding aids? Digitized full text?

10.) (For institutions utilizing Encoded Archival Description) How did you learn it? (For those not using EAD) Do you have plans to use EAD for your finding aids? What may be needed for you to take this step?
