Award Winning Reads

Start with your Assignment 2 code, and add the following features:

- Add a new book as described in the Week 5 'Adding Data' slides.

- Validate the data for a new book as described in the Week 5 'Validate Data' slides. You can use either HTML or PHP (or both) to perform validation. Note that you must rely on PHP to validate the uniqueness of the ISBN.

- Enhance the user interface by including support for a book cover image as described in the Week 6 'User Interface and Database Enhancement' slides.

- What's provided in the A3-Files.zip:

  - A new database, `books.db`, that defines a new 'Cover' column with file names for the images

  - A folder, `images.zip`, that contains the image files. Unzip into your application folder.

Zip the folder with your application, name it ***Lastname_A3.zip***, and email to me.
