**Georgia Tech Research Institute** 

DigCCurr2007, Chapel Hill, NC

April 19-20, 2007

Georgia

. Research

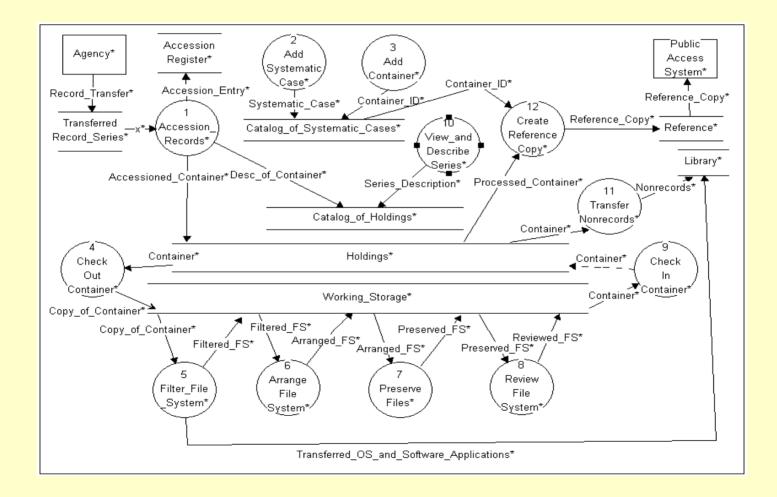

## Background

- Initial Objective: Develop tools to support Archivists in gaining intellectual and physical control of PC records from the Administration of President George H. W. Bush.
- Contents of 500+ Hard Drives
- Included operating system and software applications as well as user-created files.
- DOS and Windows 3.1
- AT and 386 and Macintosh computers
- No viewers, just the original software applications

# Presidential Electronic Records PilOt System (PERPOS)

- Developed a prototype system to support accession, arrangement, preservation, review, and Description of e-record series.
- Evolutionary Prototyping
- System has been pilot-tested by archivists at the Bush Presidential Library
- Systematically processed several record series

# Review Activity: Finding Aid

## Summary of Research Results and Benefits

PERPOS: A Prototype E-Record Repository and Archival Processing System.

- Supports both Systematic and FOIA Processing of Presidential erecords. [Pilot tested by Archivists]
- Provides an environment for experimental application of advanced information technologies to archival processes.
- Document Type Identifier Speeds up processing, e.g., Automatic insertion of withdrawal information
- Automatic description of items, file units and record series Enables earlier intellectual control of e-records.
- Prototype Access Restriction Checker Many Potential Benefits
- Knowledge Acquisition Reduces work required to apply Access Restriction Checker to Records of Subsequent Administrations
